1. About this manual

> **About the screenshots:** the pictures in this manual were taken from the real software using sample data for a fictional restaurant (“Spice Garden”). Your own names, dishes and amounts will differ.

RestoPOS is a restaurant billing (POS) system that runs on your own computer. It handles billing at the counter, the kitchen ticket (KOT), stock, supplier purchases, daily expenses, cash-drawer closing, GST and reports — for up to four branches plus the owner’s head-office view.

This manual explains **every screen, every button and every label** in the software, in plain language. Find your role in the table below and read the chapters marked for you.

You are…	Read these chapters first
Cashier (takes orders, bills, counter cash)	2, 3, 5 (Login, Top bar), 6.2 POS, 6.6 Expenses, 6.7 Day Close, 10
Branch Manager (stock, menu, expenses, day close of one branch)	2, 3, 5, 6.1–6.9, 9, 10
Owner / Super Admin (all branches, settings, reports, users)	Everything, especially 6.3, 6.8, 6.9 and 7
Person installing / maintaining the computer	11 (Setup, backup, phone access), 12 (Troubleshooting)

> **Important to know before you start:** a few things in the original plan are *not available in this version of the software yet* (for example, adding tables, adding branches, inter-branch stock transfer screen, bill history/cancel screen). They are listed honestly in **Chapter 13 — Current limitations**. Please read it so you are not surprised.

2. The three user roles

Every person who signs in has one role. The role decides which screens they see and what they can change.

Role	Branch	Purpose
Super Admin (Owner)	All branches	Full control: settings, users, all reports, branch comparison, menu creation, backups.
Branch Manager	One branch	Runs one outlet: stock, purchases, expenses, day close, reports of that branch. Cannot open *Settings*.
Cashier	One branch	Billing, KOT, petty-cash expenses, day close. Nothing else.

2.1 What each role can see (left menu)

Screen	Super Admin	Branch Manager	Cashier
Dashboard	✔	✔	—
POS Billing	✔	✔	✔
Menu Manager	✔	✔ (see note)	—
Inventory	✔	✔	—
Purchases	✔	✔	—
Expenses	✔	✔	✔
Day Close	✔	✔	✔
Reports	✔	✔	—
Settings	✔	—	—

Finer rules

- **Creating a new menu item** is allowed for the **Super Admin only**. Managers can edit existing items, change availability and delete, and manage categories.
- **Expenses:** a Cashier can *record* a new expense. Only a Manager or Super Admin can *edit or delete* an expense or *create a new expense category*.
- **Branch-wise comparison** on the Dashboard is shown to the Super Admin only.
- A Cashier opening the software lands directly on **POS Billing**. Managers and the Super Admin land on the **Dashboard**.

3. Quick start (5 minutes)

3.1 Cashier — a normal day

1. **Sign in** (Chapter 5.1).
2. Open **Day Close** → type the **Opening Cash Balance Float** (the coins and notes you start with) → press **Open Cash Drawer & Start Billing**.
3. Open **POS Billing**. Choose *Dine-In*, *Takeaway* or *Delivery*.
4. Tap dishes (or type a short code like `101` and press **Enter**). Add notes if needed.
5. Press **Print KOT (F2)** to send the order to the kitchen.
6. When the guest pays, press **Settle (F12)** → choose Cash/UPI/Card → **Finalize & Print**.
7. Record any cash you paid out (vegetables, gas…) in **Expenses**, choosing *Counter Cash Drawer*.
8. At night open **Day Close**, count the physical cash, type it in, press the close button.

3.2 Manager — a normal day

1. Check the **Dashboard** for sales.
2. Receive goods → **Purchases → New Inward Purchase** (stock goes up automatically).
3. Check **Inventory → Show Low Stock Only** and order what is low.
4. Review **Expenses** and **Day Close** history for shortages.

3.3 Owner — a normal day

1. Open the **Dashboard**, choose *Today / This Week / This Month*.
2. Compare branches in **Branch Performance Matrix**.
3. Open **Reports** for GST, profit & loss and best-selling dishes; press **Export CSV**.
4. Use **Settings → Database Backup → Create Backup Now** regularly.

4. Opening the software

4.1 On the shop computer

Open a browser (Chrome or Edge) and go to **http://localhost:5173** (if started with `npm run dev`) or **http://localhost:3456** (if started with `npm start`). Your installer will tell you which one.

4.2 On a phone or tablet (same Wi-Fi)

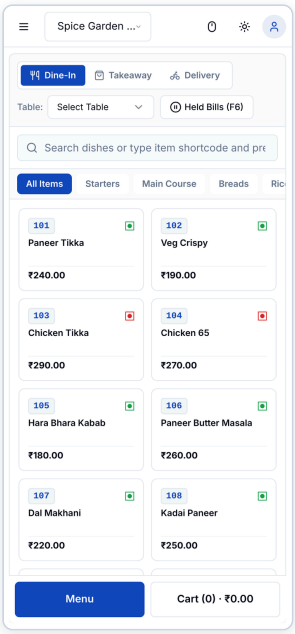

Figure 1. Phone: Menu view

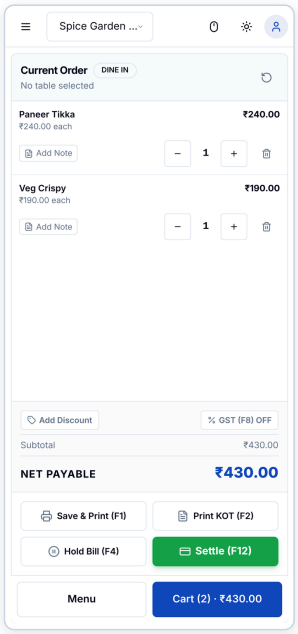

Figure 2. Phone: Cart view

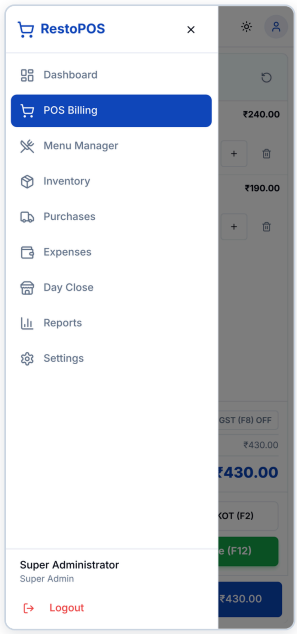

Figure 3. Phone: navigation menu (☰)

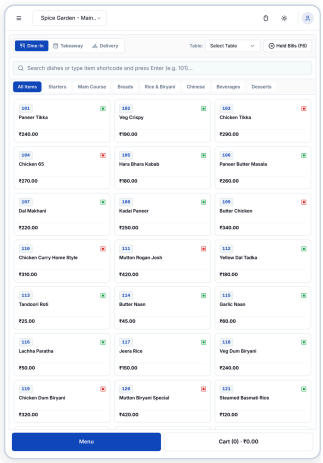

Figure 4. Tablet: POS

1. On the shop PC, press **Windows key**, type `cmd`, press Enter, type `ipconfig` and note the **IPv4 Address** (for example `192.168.1.20`).
2. On the phone/tablet browser open `http://192.168.1.20:3456` (use your own address and port).
3. In the browser menu choose **Add to Home screen** to get an app-like icon.

The software automatically adapts to the screen size:

- **Phone / small tablet:** the left menu hides behind a ☰ button; POS shows either *Menu* or *Cart* with a switch bar at the bottom.
- **Large tablet in landscape / laptop / desktop:** the full layout with the permanent left menu.

> The computer running RestoPOS must be switched on and on the same network. If the phone cannot open the page, see Chapter 12.

5. Common screen elements

5.1 Login screen

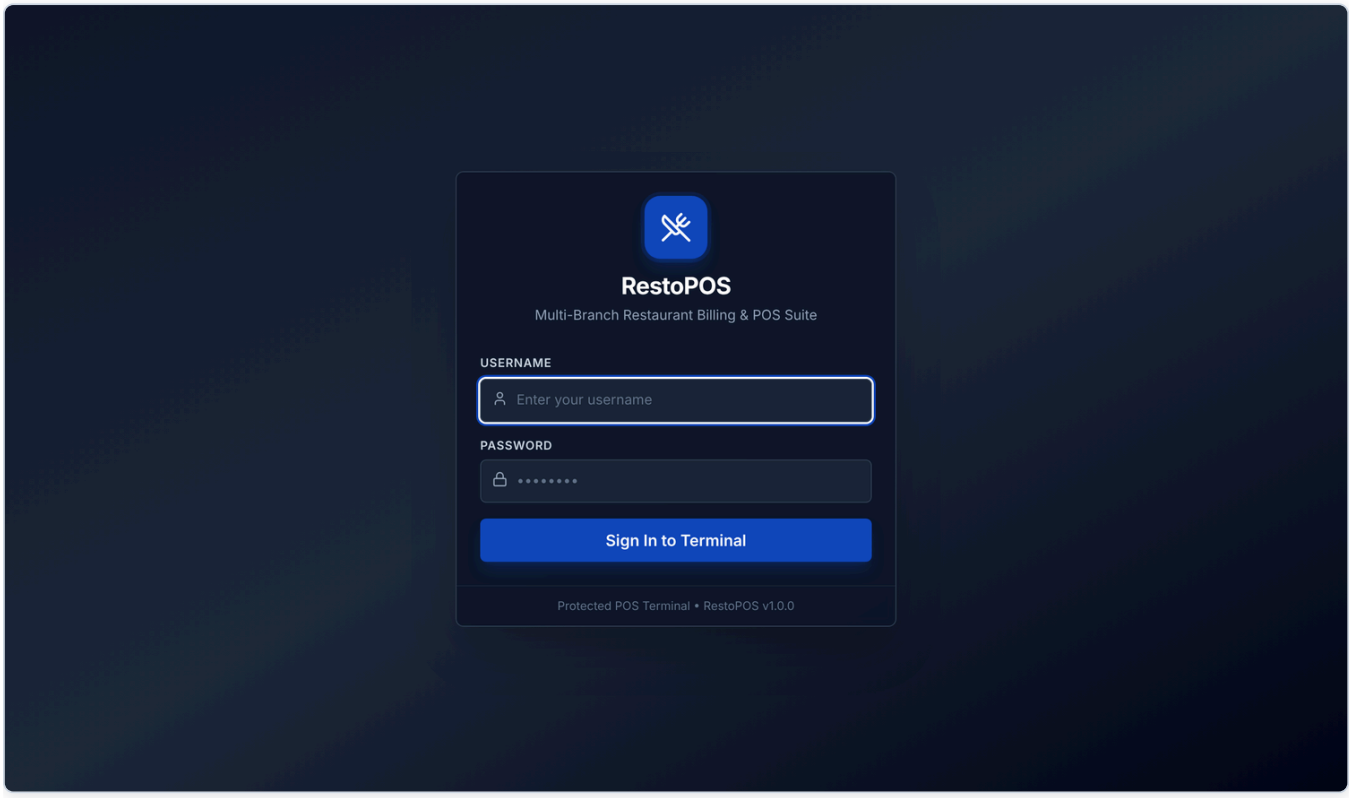

Figure 5. *The sign-in screen*

Label	What to do
Username	Type your user name, e.g. `cashier1`.
Password	Type your password.
Sign In to Terminal	Press to enter. A green message "Welcome back, *your name*!" confirms.

If the username or password is wrong, a red message appears; try again. Ask the owner to reset a forgotten password (6.9, *Staff Users*).

5.2 The top bar

Item	Meaning
☰ (phones/tablets only)	Opens the left menu.
Branch box	*Super Admin:* a drop-down **Select Branch** — choose which outlet you are working on. Everything (menu prices, stock, bills, reports) then refers to that branch. *Manager/Cashier:* shows your branch name (fixed).

Item	Meaning
Mouse / Keyboard icon	Switches POS style between **Touch Mode** (tap items) and **Keyboard Mode** (type short codes). Hover to read the current mode.
Sun / Moon icon	Choose **Light**, **Dark** or **System** colour theme.
Person icon / your name	Shows who is signed in and the role (name appears on larger screens).

> **Super Admin:** always choose a branch before billing. If no branch is selected the POS will say *"Please select a branch (top bar) before billing"*.

5.3 The left menu

Lists the screens your role can open (table in 2.1). At the bottom you see your name, role and **Logout**. On a laptop/desktop use the small **‹ / ›** arrow at the top to shrink the menu to icons only.

5.4 Messages (toasts)

Small boxes at the top-right confirm or warn: green tick = done, red = failed/needs attention. Read them — if a save fails the software tells you and does **not** pretend it saved.

5.5 Money and units

- All amounts are in **Indian Rupees (₹)**, shown with two decimals.
- The final bill amount is **rounded to the nearest whole rupee**; the difference is shown as **Round Off**.
- Stock quantities use units such as kg, litre, piece, cylinder.

---

6. Screen-by-screen guide

6.1 Dashboard (Owner & Manager)

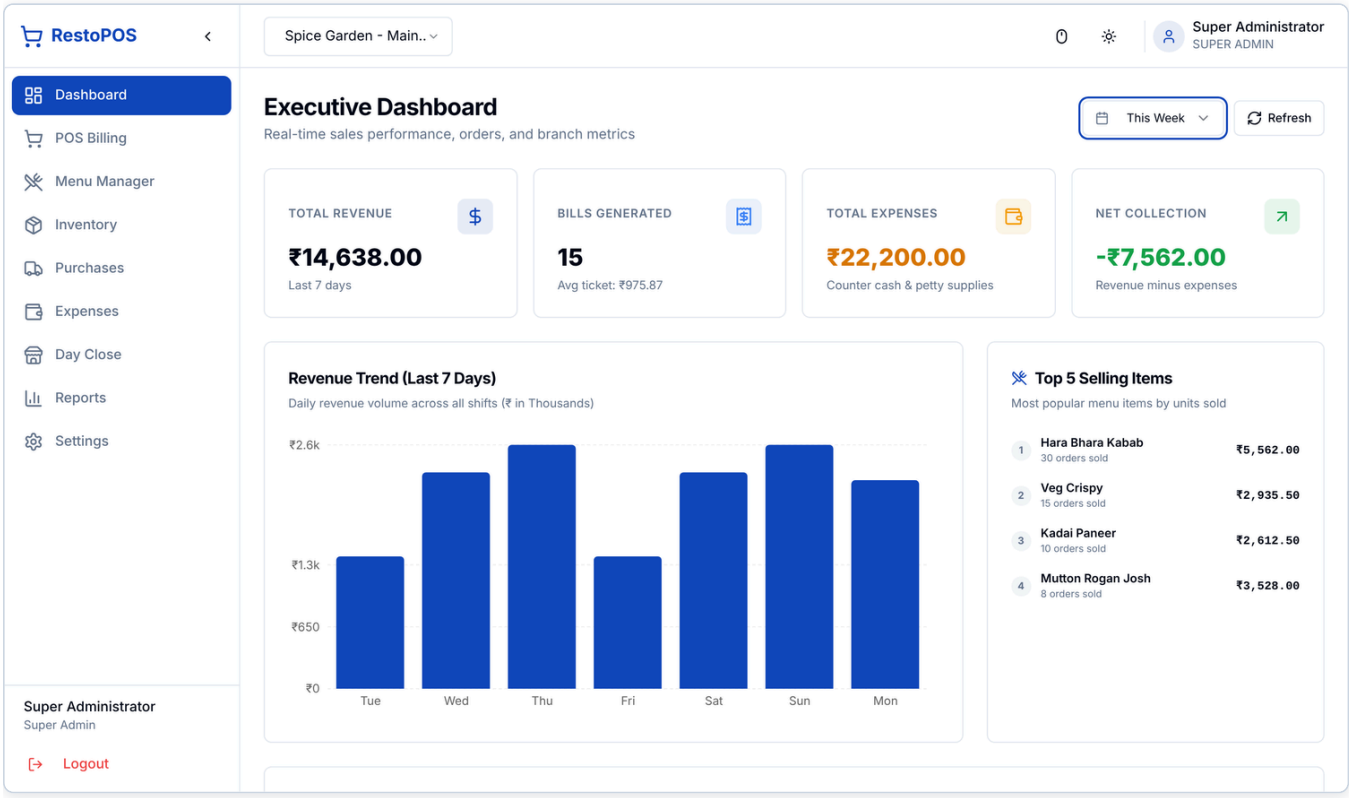

Figure 6. Dashboard — summary cards, 7-day revenue trend and top-selling dishes

Purpose: a quick picture of how the business is doing.

Top right controls

Label	Meaning
Today / This Week / This Month	Period for the figures below ("This Week" = last 7 days, "This Month" = from the 1st).
Refresh	Reload the latest numbers.

Four summary cards

Card	Meaning
Total Revenue	Total sales (net bill amounts, cancelled bills excluded) in the period.
Bills Generated	Number of bills; below it **Avg ticket** = revenue ÷ bills.
Total Expenses	All recorded expenses in the period (counter cash and bank).
Net Collection	Revenue minus expenses.

Revenue Trend (Last 7 Days) — bar chart, one bar per day, amounts in ₹ thousands (always the last 7 days).

Top 5 Selling Items — most popular dishes by quantity, with number sold and sales value.

Branch Performance Matrix *(Super Admin only)* — one row per branch:

Column	Meaning
Code	Branch code (B1…B4).
Branch Name	Outlet name.
Today's Sales	Sales for the selected period.
Orders	Number of bills.
Expenses	Expenses for the period.
Net Margin	Sales minus expenses.
Status	Active.

When the database is new, everything shows **₹0.00 / 0** and empty lists — that is correct.

6.2 POS Billing (everyone)

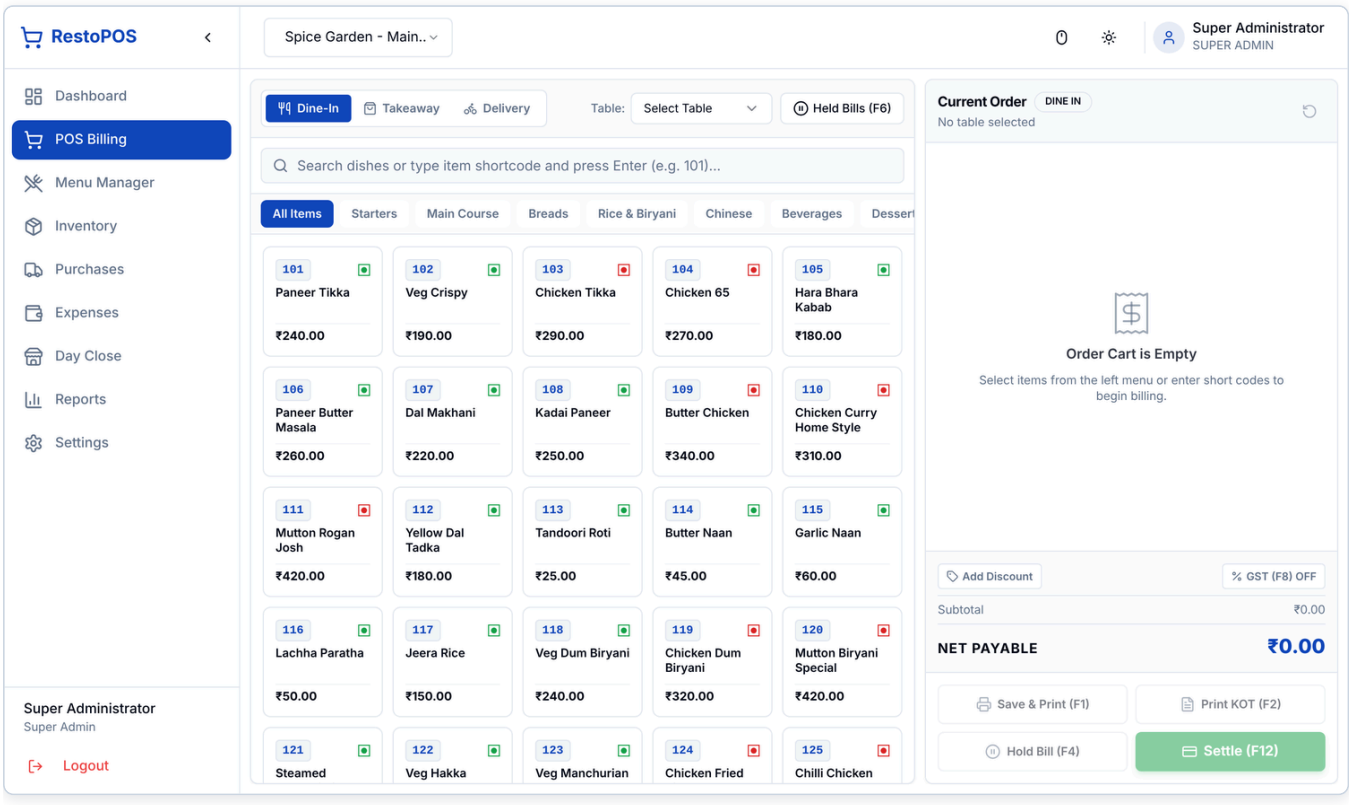

Figure 7. *POS Billing — menu side (left) and order side (right)*

The heart of the software. It has a **menu side** (left) and an **order/cart side** (right). On phones/small tablets use the bottom switch **Menu | Cart (n) · ₹total**.

6.2.1 Order type and customer details (top of the menu side)

Button / box	Meaning
Dine-In	Guest eats in the restaurant. Shows the **Table** box.

Button / box	Meaning
Takeaway	Parcel; shows **Customer Name / Customer Phone** and the **Parcel** button.
Delivery	Home delivery; also shows **Customer Name / Customer Phone** and **Parcel**.
Table: Select Table	Choose the table number/name for dine-in. *(Tables must already exist — see Chapter 13.)*
Customer Name / Customer Phone	Optional details for takeaway/delivery (useful for credit/due customers and delivery calls).
Held Bills (F6)	Opens the list of orders that are saved but not paid (6.2.7).

6.2.2 Finding and adding dishes

- **Search box** — "Search dishes or type item shortcode and press Enter (e.g. 101)". Type part of a dish name to filter, or type the exact **short code** and press **Enter** to add it instantly. Pressing Enter with only one match also adds that match.
- **Category tabs** — **All Items**, Starters, Main Course, … Tap one to show only that category.
- **Dish cards** — each card shows the **short code** (blue), a **green/red dot** (green = vegetarian, red = non-vegetarian), the **name** and the **price**. **Tap a card to add one**; tap again to add more.
- **No menu items match your criteria / Reset Filters** — appears when the search finds nothing; press **Reset Filters** to start over.
- Dishes marked *not available* in the Menu Manager cannot be ordered.

6.2.3 The cart (right side)

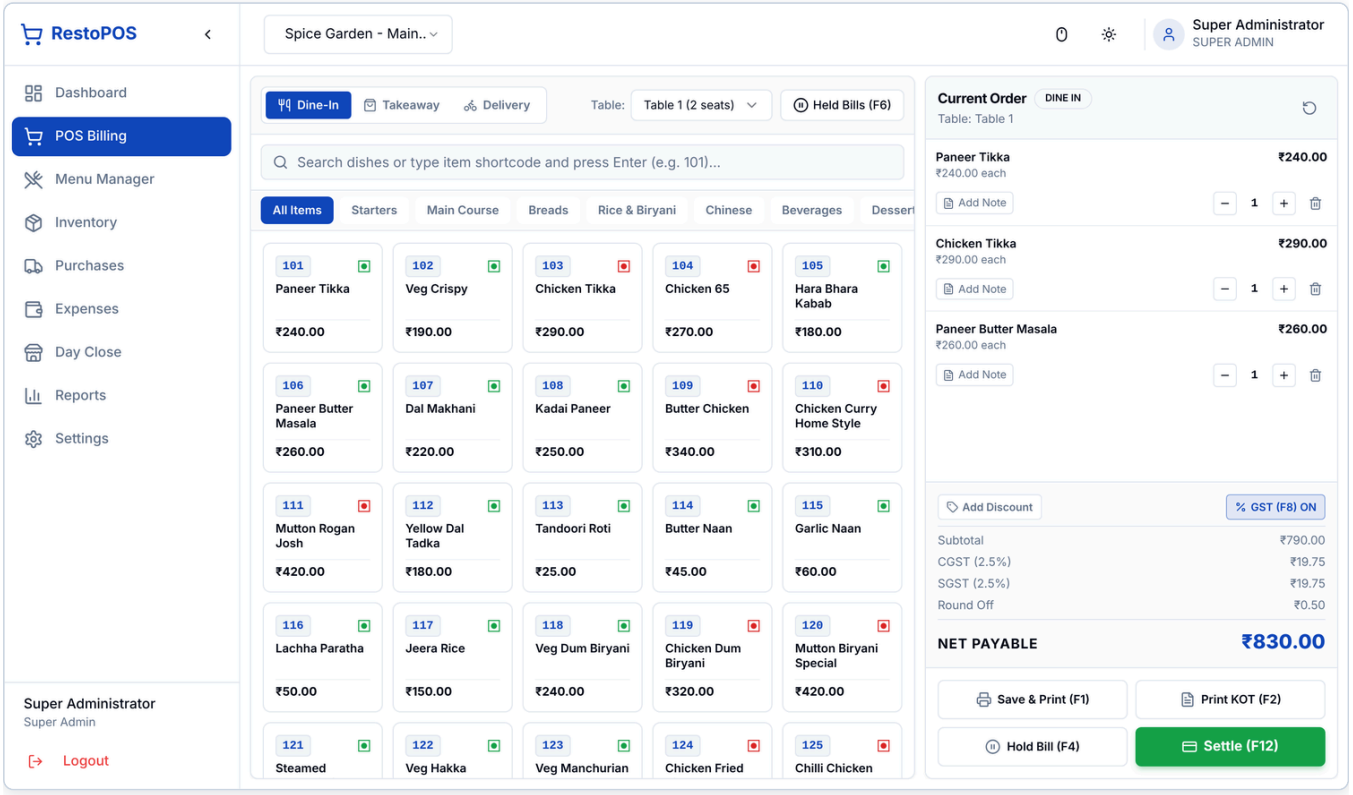

Figure 8. *An order in progress: three dishes, GST switched ON, Net Payable at the bottom*

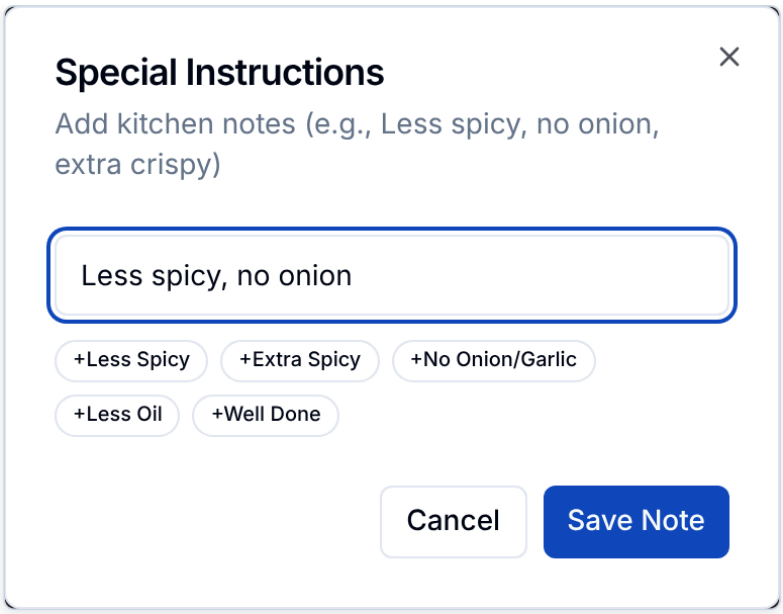

Figure 9. Special Instructions — a kitchen note for one dish

Header: **Current Order**, the order type badge, and "Table: ..." or customer name. The ↺ **(clear)** icon (shortcut **F9**) empties the cart after asking you to confirm.

Each line shows: dish name, price each, line total, and:

Control	Meaning
− / +	Decrease / increase quantity. Reducing to 0 removes the line.
Add Note (small note icon)	Opens **Special Instructions** — type a kitchen note such as "Less spicy, no onion" → **Save Note**. The note prints on the KOT.
Trash icon	**Remove Item** from the order.

An empty cart shows **Order Cart is Empty — Select items from the left menu or enter short codes to begin billing.**

6.2.4 Totals area and quick options

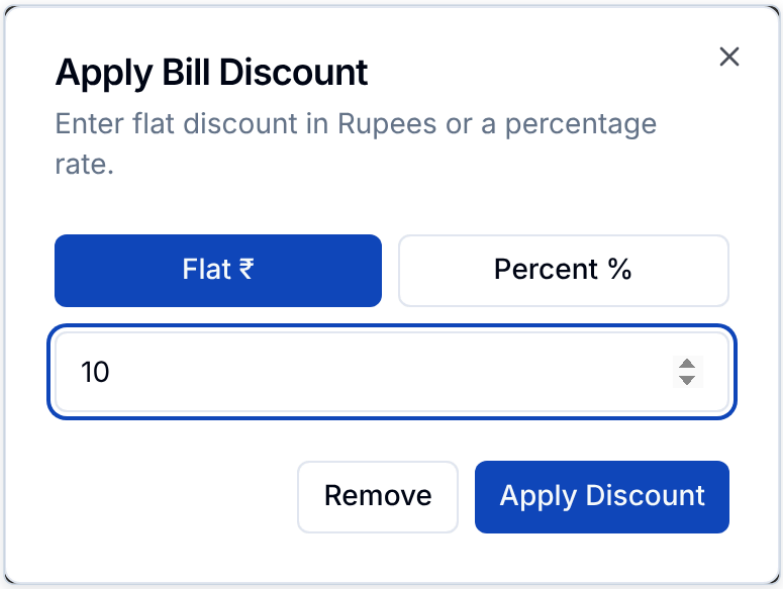

Figure 10. Apply Bill Discount — flat rupees or percent

Label	Meaning
Add Discount	Opens **Apply Bill Discount**: choose **Flat ₹** (a rupee amount) or **Percent %**, type the value, press **Apply Discount**. **Remove** cancels the discount. The discount applies to the whole bill.
GST (F8) ON / OFF	Switches GST on or off for *this bill only* (see Chapter 8).
Parcel *(Takeaway/Delivery only)*	Adds or removes a **₹20 packing charge** with one tap.
Subtotal	Sum of dish totals.
Discount	Shown only when a discount is applied (negative).
CGST (2.5%) / SGST (2.5%)	Shown when GST is ON; half of the tax each.
Parcel / Packing	The packing charge, if added.
Round Off	Small ± amount to make the total a whole rupee.
NET PAYABLE	**The final amount to collect.**

6.2.5 Action buttons

Button	Shortcut	What it does
Save & Print (F1)	F1	Saves the bill as an **open bill** and prints the customer receipt. The bill stays *unpaid* — use this to hand the guest the bill before they pay. Settle it later from **Held Bills**.
Print KOT (F2)	F2	Prints the **Kitchen Order Ticket** for items not yet sent to the kitchen. Items already sent are not printed twice ("All items ... already sent to KOT").
Hold Bill (F4)	F4	Parks the order so you can serve another customer. It appears under **Held Bills**.
Settle (F12)	F12	Opens payment (6.2.6).

6.2.6 Settle Payment dialog

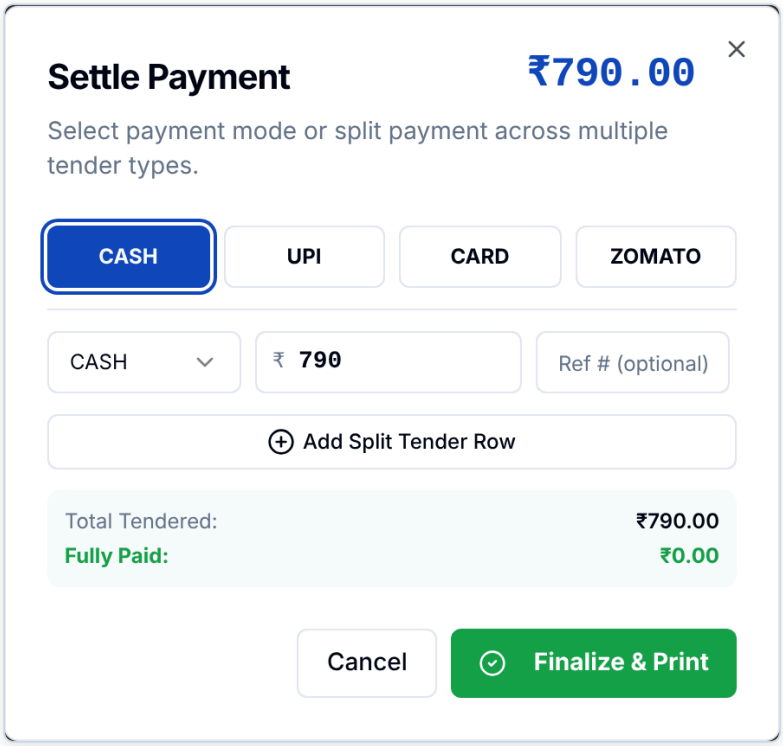

Figure 11. Settle Payment — choose the payment mode, split if needed, then Finalize & Print

Shows the amount due at the top right.

Label	Meaning
CASH / UPI / CARD / ZOMATO / SWIGGY / PAYTM / CREDIT	Quick buttons to choose the first payment type. **CREDIT** means the customer will pay later (a due customer).
Payment-mode box, amount box (₹), Ref # (optional)	One row per payment: choose the mode, enter the amount, and optionally a UPI/card reference number.
Add Split Tender Row	Add another row for **split payments** — e.g., ₹300 Cash + ₹200 UPI.
Total Tendered / Remaining Due	Running total of what is entered and what is still pending. The green **Fully Paid** shows when it is covered.
Finalize & Print	Completes the bill and prints the receipt. Disabled until the full amount is covered.
Cancel	Close without paying.

When settled, the bill is closed, the cart clears, **cash payments are added to the day's cash drawer**, and a green message confirms.

6.2.7 Held Orders dialog (F6)

Figure 12. *Held Orders — resume a saved or parked bill*

Lists open/held bills with bill number, table or customer and amount. Press **Resume** to load it back into the cart for more items or payment. (This is where "Save & Print" bills are settled later.)

6.2.8 Keyboard shortcuts (POS)

Key	Action
Enter (in search)	Add item by short code / single match
F1	Save & Print bill
F2	Print KOT
F4	Hold bill
F6	Held Bills
F8	GST on/off
F9	Clear cart
F12	Settle / payment
Esc	Close the open dialog

> On a PC, switch to **Keyboard Mode** (top bar icon) for fastest billing: type code → Enter → type next code → Enter → F12.

6.2.9 Typical flows

Dine-in: Dine-In → pick Table → add dishes → **F2** KOT → (guest finishes) → **F1** print bill (optional) → **F12** Settle.

Takeaway: Takeaway → add dishes → *Parcel* if charged → **F12** → Cash → Finalize & Print.

Rush hour: Order 1 → **F4** Hold → serve Order 2 → **F6** → Resume Order 1.

6.3 Menu Manager (Manager & Owner)

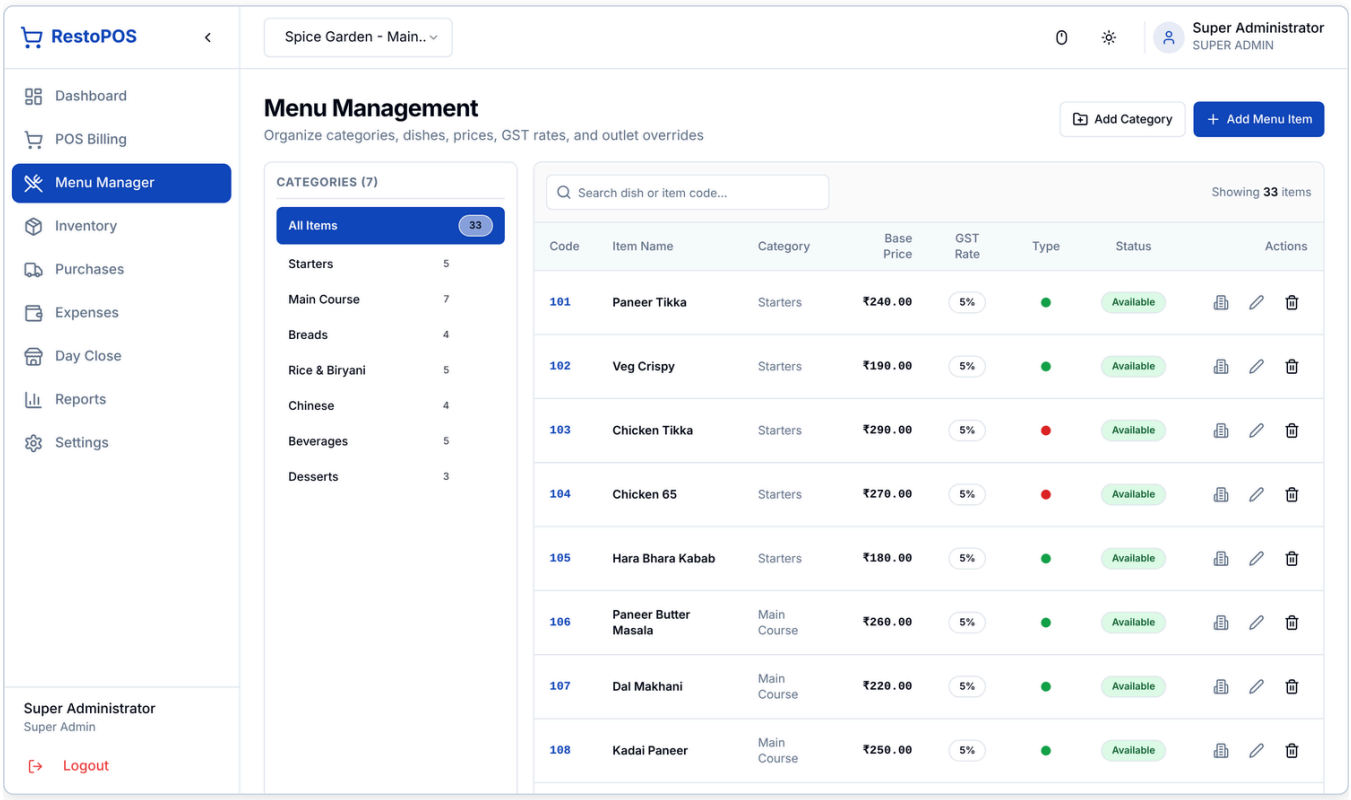

Figure 13. Menu Manager — categories on the left, dishes on the right

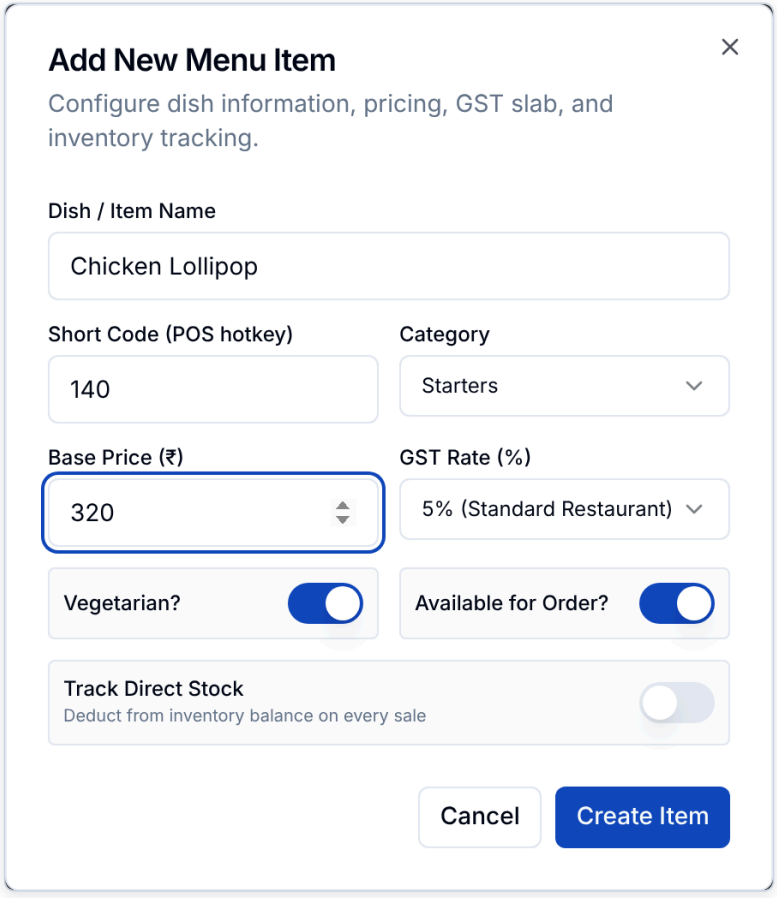

Figure 14. Add New Menu Item dialog

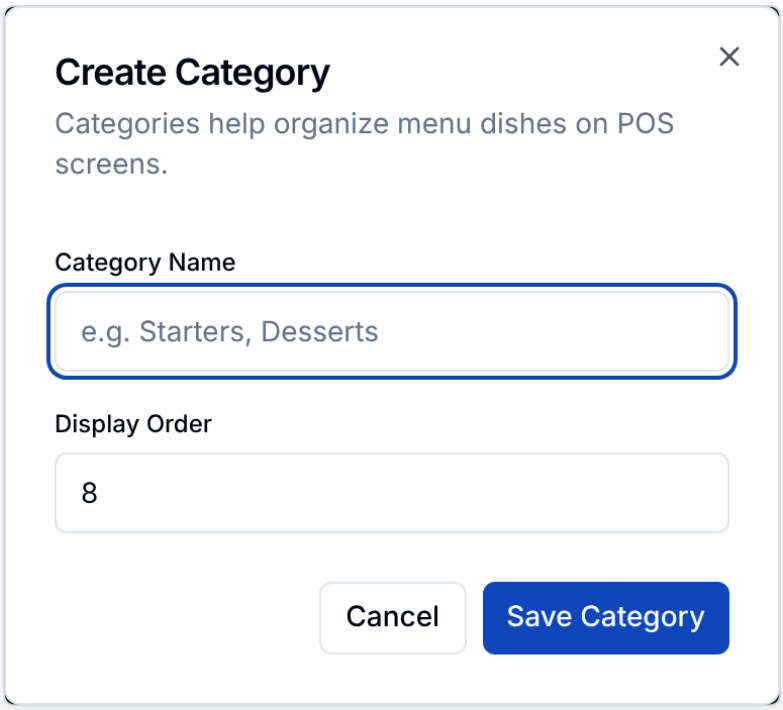

Figure 15. Create Category dialog

Purpose: your dish list, categories, prices and GST rates.

Buttons at the top: Add Category, **Add Menu Item** *(Super Admin only)*.

Categories panel (left): All Items plus each category with the number of dishes. Tap one to filter the table. Use the small edit/delete icons beside a category to rename (**Edit Category**) or delete it. A category that still has dishes **cannot be deleted** ("Cannot delete category with associated items").

Category dialog

Field	Meaning
Category Name	e.g. *Starters, Desserts*.
Display Order	Smaller numbers appear first on the POS.
Save Category	Saves.

Dish table

Column	Meaning
Code	Short code used for fast keyboard billing (must be unique).
Item Name	Dish name.
Category	Category.
Base Price	Standard selling price (all branches unless overridden).
GST Rate	GST % applied when GST is ON.
Type	Veg / Non-veg.
Status	Available or not.
Actions	**Branch Price Override** (₹ icon), **Edit Item**, **Delete Item**.

A **search box** (“Search dish or item code...”) filters the table. **No dishes found → Add Dish Now** appears when empty.

Add / Edit Menu Item dialog

Field	Meaning
Dish / Item Name	Name shown on POS and bill.
Short Code (POS hotkey)	Number you type in POS, e.g. 101.
Select Category	Category.
Base Price (₹)	Price in rupees.
GST Rate (%)	0% (Nil), 5% (Standard Restaurant), 12%, 18% (AC/Bar), 28%.
Vegetarian?	On = green dot.
Available for Order?	Off hides the dish from ordering (e.g. sold out).
Track Direct Stock	Marks the dish as stock-tracked (see 6.4 and Chapter 13).
Create Item / Save Changes	Saves.

Branch Price Overrides — set a different price for one outlet only (e.g. Branch 2 charges ₹10 more). Leave blank to use the base price. Press **Save Overrides**.

6.4 Inventory (Manager & Owner)

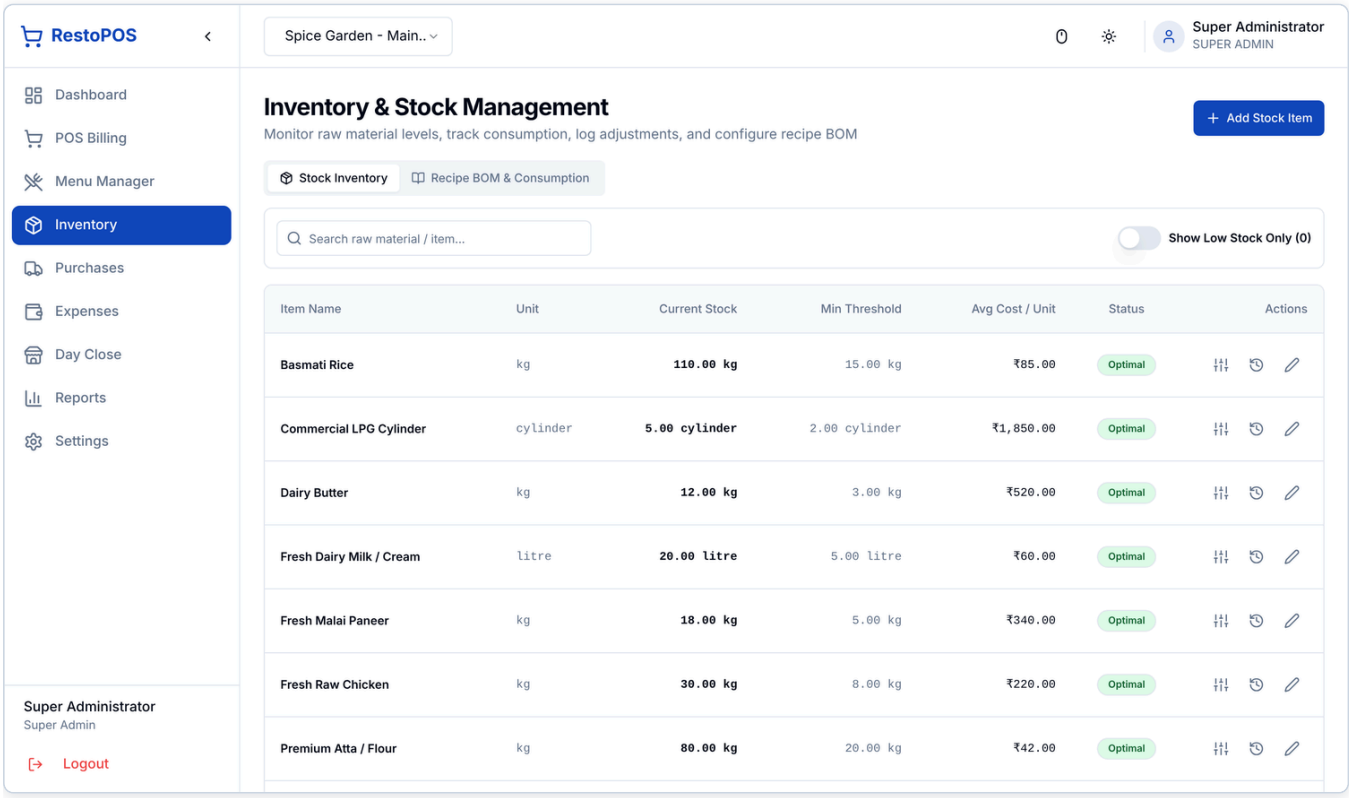

Figure 16. Inventory — stock on hand with minimum thresholds

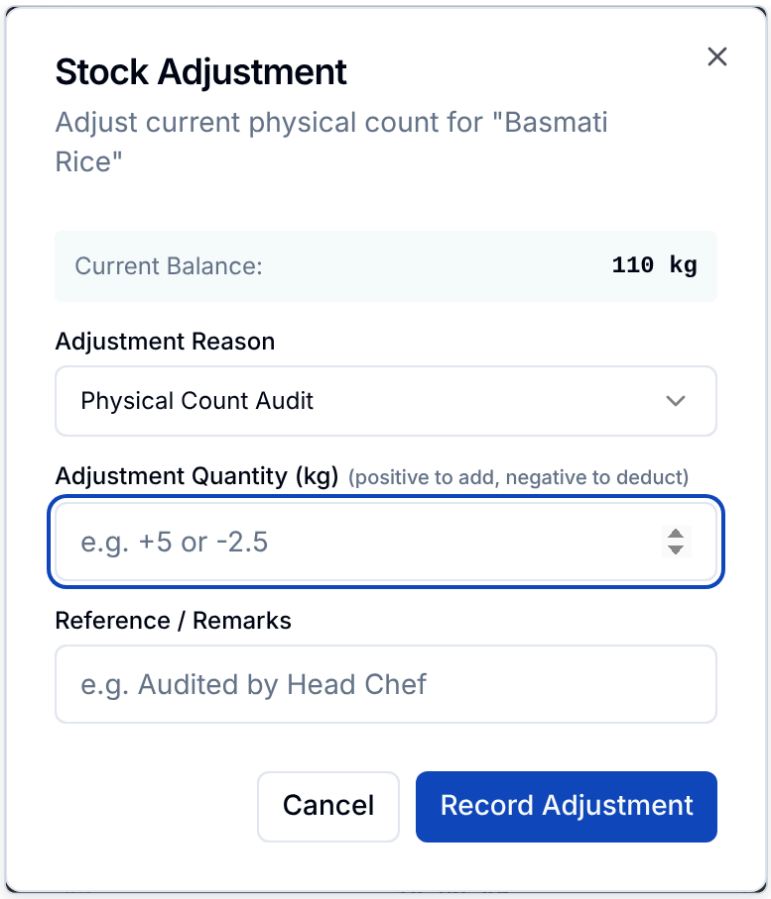

Figure 17. Stock Adjustment dialog (wastage, audit, opening stock)

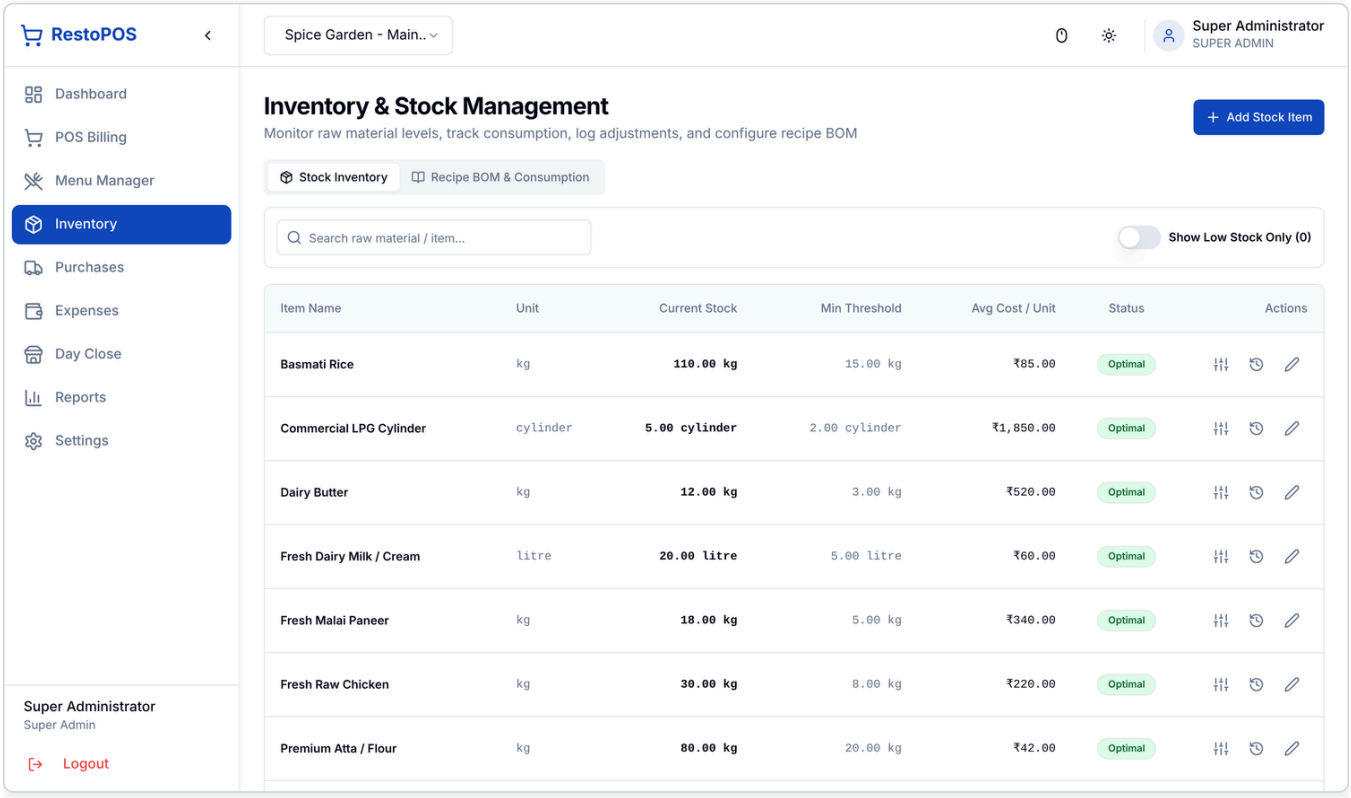

Figure 18. Recipe BOM & Consumption tab

Purpose: know what raw material and packed goods you have.

Two tabs: **Stock Inventory** and **Recipe BOM & Consumption**.

Stock Inventory tab

Control	Meaning
Add Stock Item	Create a new raw material / stock item.
Search raw material / item…	Filter by name.
Show Low Stock Only (n)	Switch: only items at or below their minimum. The number is how many are low.

Table columns

Column	Meaning
Item Name	Raw material (Rice, Oil, Chicken, Gas cylinder…).
Unit	kg, litre, piece, …
Current Stock	Quantity on hand now.
Min Threshold	The level at which you want a warning.
Avg Cost / Unit	Average buying price per unit.
Status	Shows a **Low** warning badge when stock is at or below the minimum (the page also shows "n Low" at the top).
Actions	**Adjust Stock (+/-)**, **Stock History Logs**, **Edit Item**.

Add / Edit item dialog: Item Name, **Unit of Measure** (kg, gram, litre, ml, piece, cylinder, packet), **Cost Per Unit (₹)**, **Min Low-Stock Threshold**.

Stock Adjustment dialog — shows **Current Balance**, then:

Field	Meaning
Adjustment Reason	*Physical Count Audit*, *Direct Purchase Intake*, *Damage / Spoilage / Wastage*, *Opening Inventory Reset*.
Adjustment Quantity	Positive to add (+5) or negative to remove (−2.5).
Reference / Remarks	Short note, e.g. "Audited by Head Chef".
Record Adjustment	Saves; recorded in the history log.

Use this for **wastage/spoilage** and for **end-of-day manual consumption** (enter the quantity used as a negative number).

Stock History Logs — the audit trail for one item: type (Purchase, Sale deduction, Wastage…), quantity, balance after, reference and date.

Recipe BOM & Consumption tab

A **recipe (BOM = Bill of Materials)** lists how much raw material one portion of a dish uses.

1. **Select Dish / Menu Item.**
2. **Add Ingredient** → choose the stock item and type quantity used per portion (e.g. Paneer 0.25 kg).
3. **Save Dish Recipe.**

> In this version recipes are stored for reference and costing. Automatic stock deduction for each sold dish is **not yet switched on** — see Chapter 13.

6.5 Purchases (Manager & Owner)

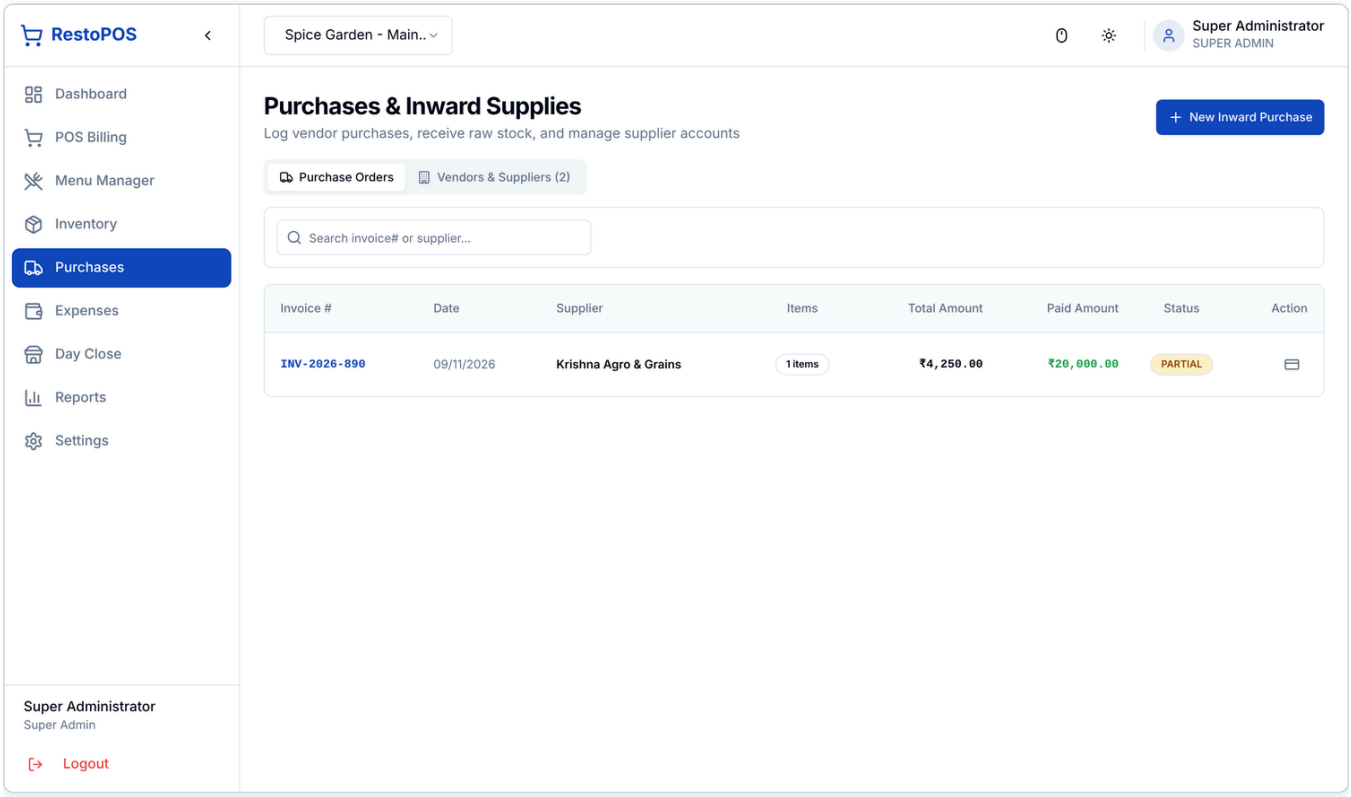

Figure 19. Purchases — inward purchase orders with payment status

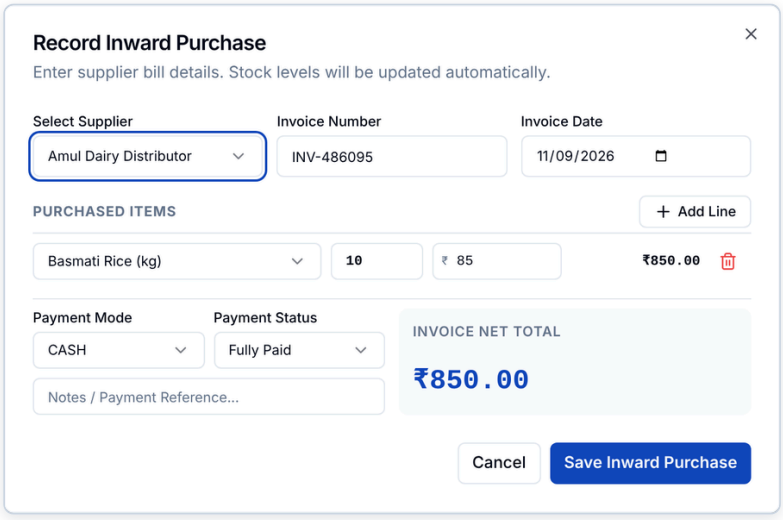

Figure 20. Record Inward Purchase dialog

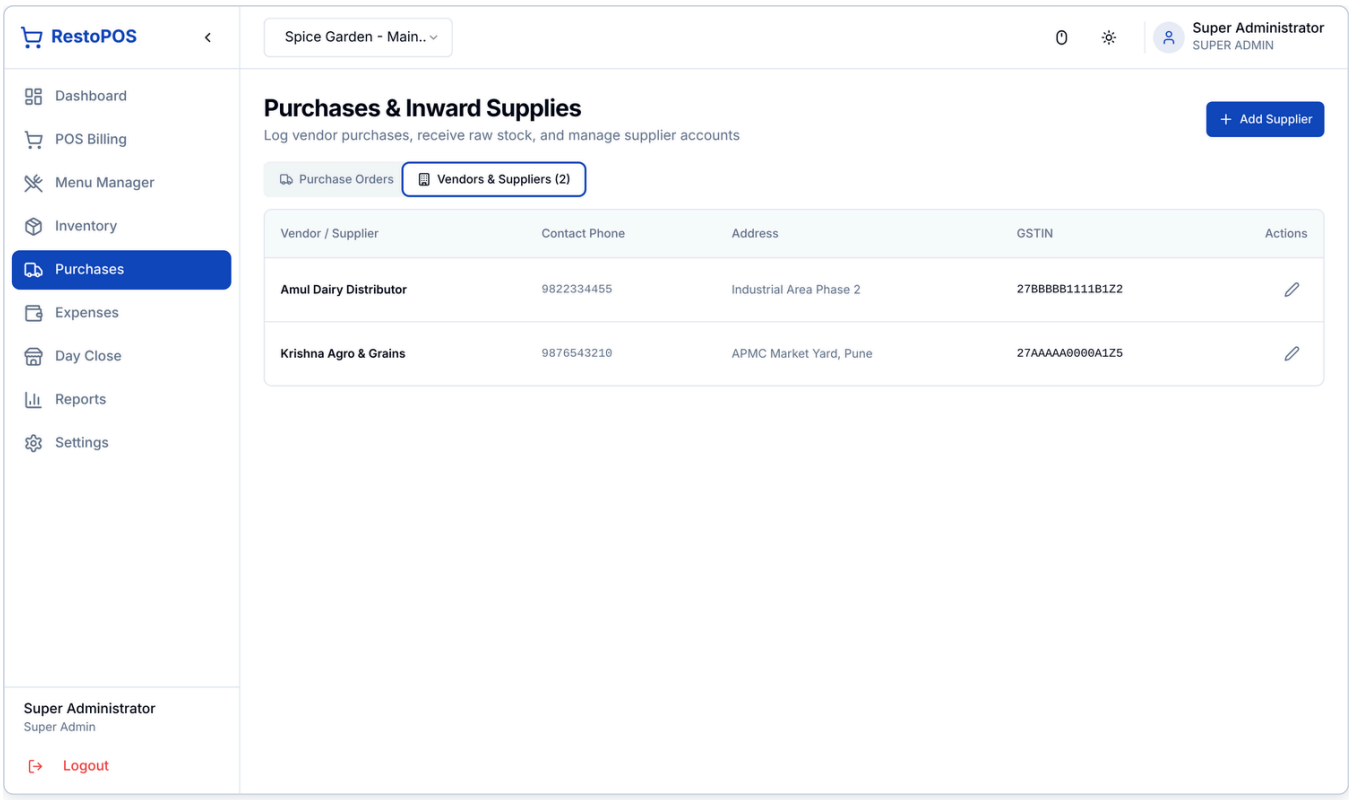

Figure 21. Vendors & Suppliers tab

Purpose: record goods bought from suppliers; stock rises automatically.

Two tabs: **Purchase Orders** and **Vendors & Suppliers (n)**.

Buttons: New Inward Purchase, **Add Supplier**.

Purchase Orders tab

Search: "Search invoice# or supplier...". Empty list shows **Create First Purchase**.

Column	Meaning
Invoice #	Supplier's bill number.
Date	Invoice date.
Supplier	Vendor.
Items	Count of lines.
Total Amount	Bill total.
Paid Amount	Amount paid so far.
Status	Paid / Partial / Unpaid (credit).
Action	**Update Payment** (when you pay the supplier later).

Record Inward Purchase dialog

Field	Meaning
Select Supplier	Vendor (add one first via *Add Supplier*).

Field	Meaning
Invoice Number / Invoice Date	From the supplier's bill.
Line items — item, Qty, Price	One row per product; add rows as needed; trash icon removes a row.
Payment Mode	CASH, UPI, Bank Transfer, Cheque.
Payment Status	**Fully Paid**, **Partially Paid**, **Unpaid (Credit)**.
Notes / Payment Reference...	Cheque no., UPI ref, remarks.
Save Inward Purchase	Saves and **increases stock** ("Purchase recorded and stock balances updated!").

Update Purchase Payment dialog: shows **Invoice** and **Total Bill**; enter **Paid Amount (₹)** and **Save Payment**. The status updates automatically.

Vendors & Suppliers tab

Columns: **Vendor / Supplier**, **Contact Phone**, **Address**, **GSTIN**, **Actions** (edit). **Register New Supplier** fields: **Company / Business Name** (required), **Phone Number**, **Business Address**, **GSTIN (Optional)**; **Save Supplier**.

6.6 Expenses (Everyone)

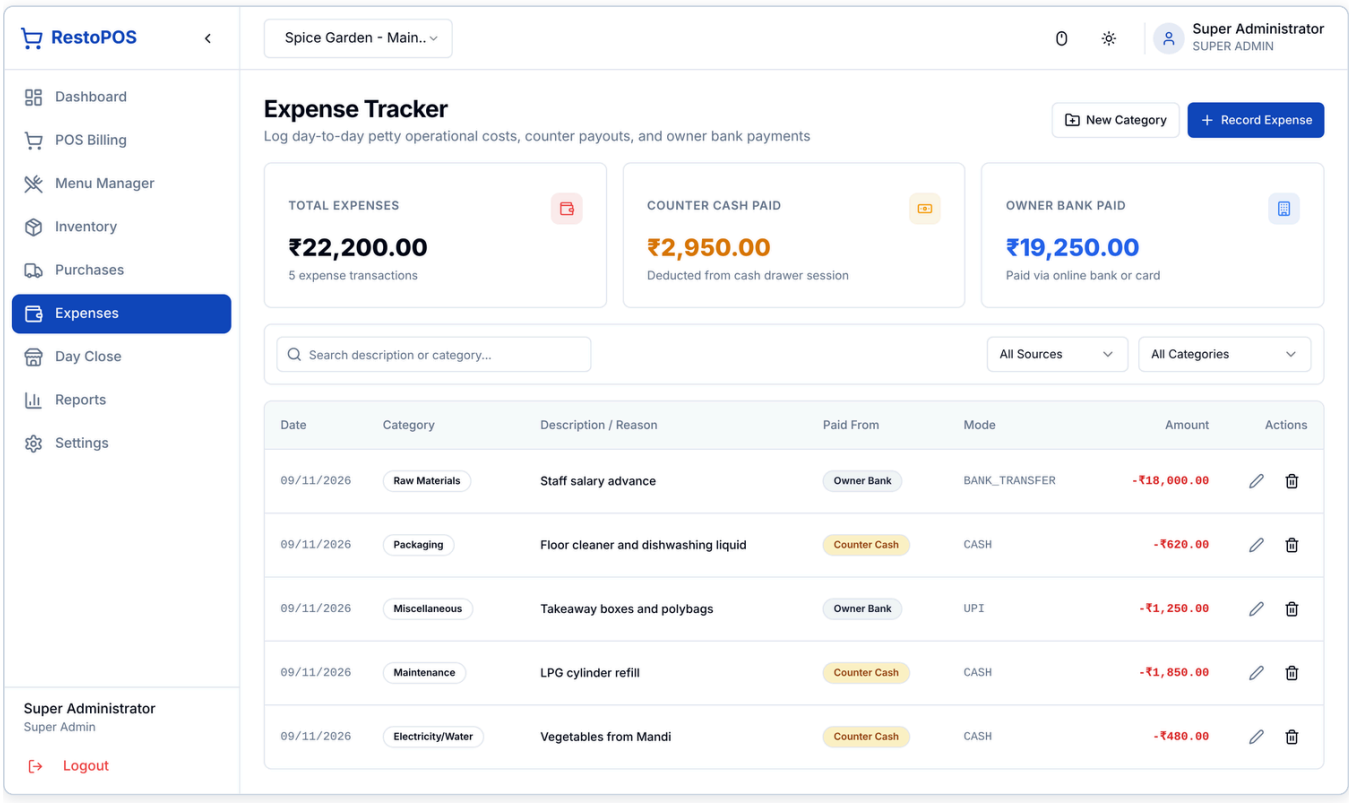

Figure 22. *Expenses — summary cards, filters and the expense register*

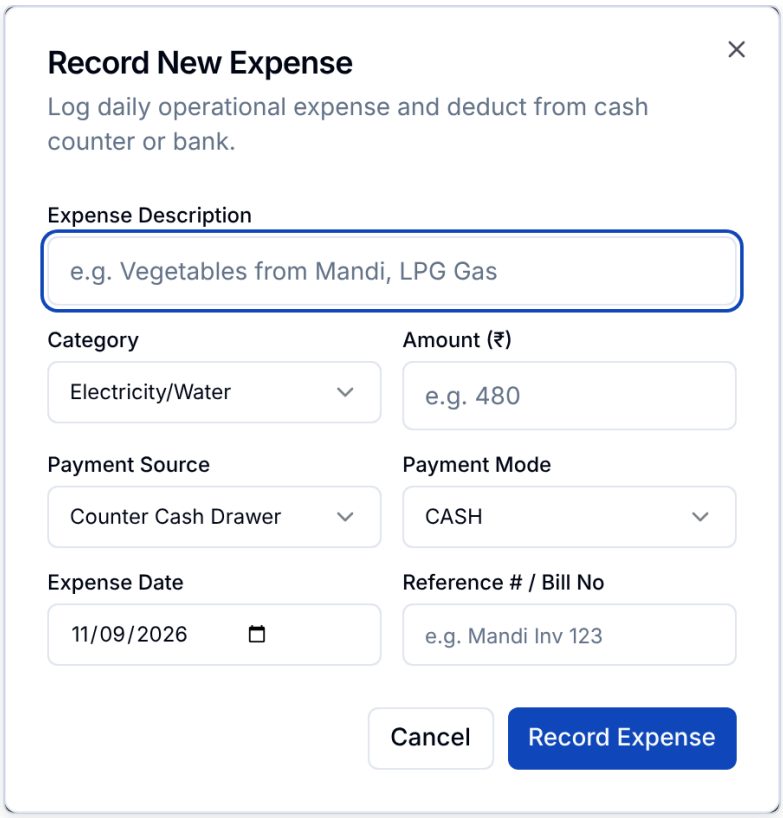

Figure 23. *Record New Expense dialog*

Purpose: record money spent on the business.

Buttons: New Category, **Record Expense**.

Summary cards

Card	Meaning
Total Expenses	Sum of listed expenses and number of transactions.
Counter Cash Paid	Spent from the drawer (reduces the day-close cash).
Owner Bank Paid	Paid from the owner's bank / UPI (does not touch the drawer).

Filters: search "Search description or category...", **All Sources / Counter Cash / Owner Bank**, **All Categories**.

Table: Date, Category, Description / Reason, Paid From, Mode, Amount, Actions (edit/delete — managers and owner only).

Record New Expense dialog

Field	Meaning
Expense Description	What was bought, e.g. "Vegetables from Mandi".
Select Category	Raw Materials, Salary, Electricity/Water, Rent, Maintenance, Packaging, Miscellaneous...
Amount (₹)	Rupees.
Payment Source	**Counter Cash Drawer** *(reduces expected closing cash)* or **Owner Bank Account**.
Payment Mode	CASH, UPI / QR Code, Bank Transfer / IMPS.

Field	Meaning
Expense Date	Defaults to today.
Reference # / Bill No	Optional.
Record Expense	Saves.

Add Expense Category dialog: Category Name (e.g. *Repairs & Plumber*) → **Create Category**.

> **Golden rule:** If you took money out of the counter cash drawer, you **must** record it here with *Counter Cash Drawer* — otherwise the day close will show a shortage.

6.7 Day Close & Cash Reconciliation (Everyone)

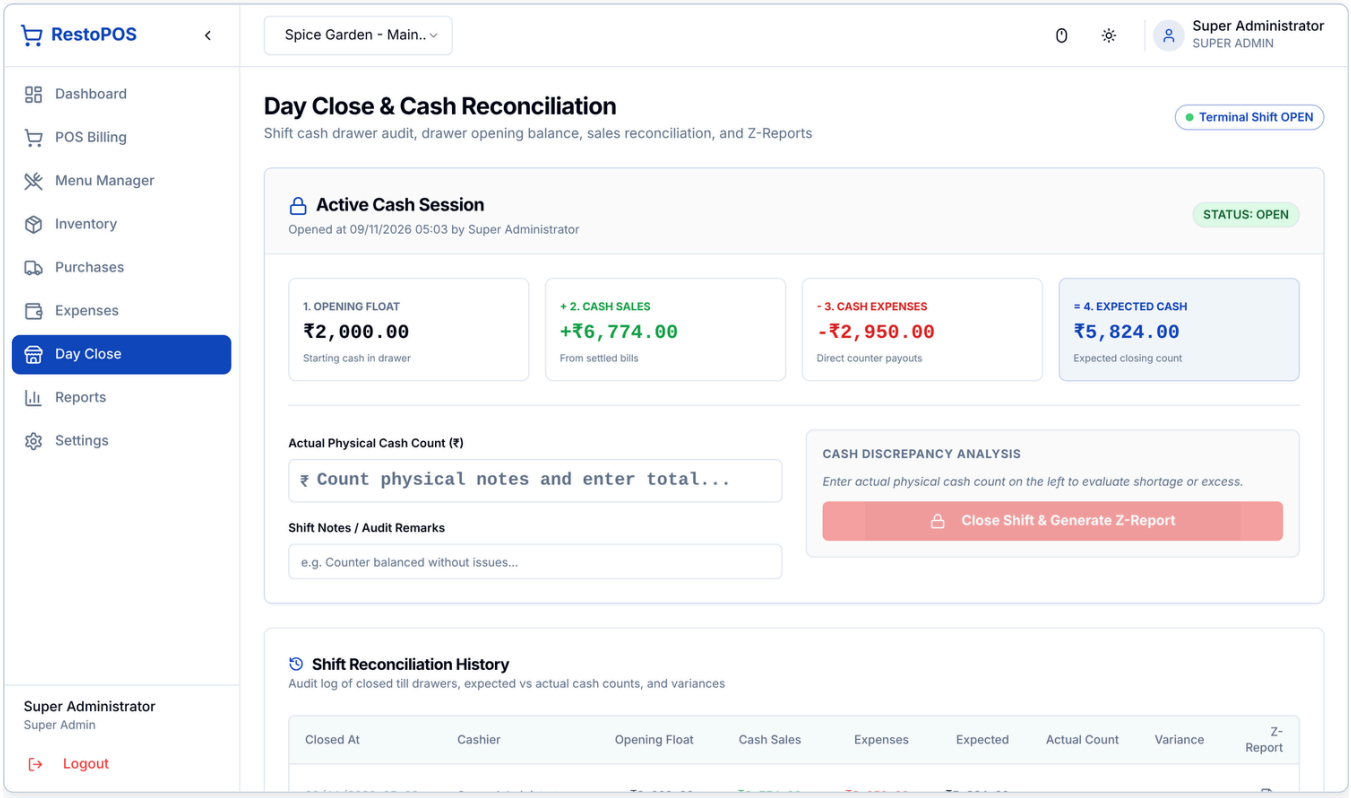

Figure 24. *Day Close — an active cash session with the four figures*

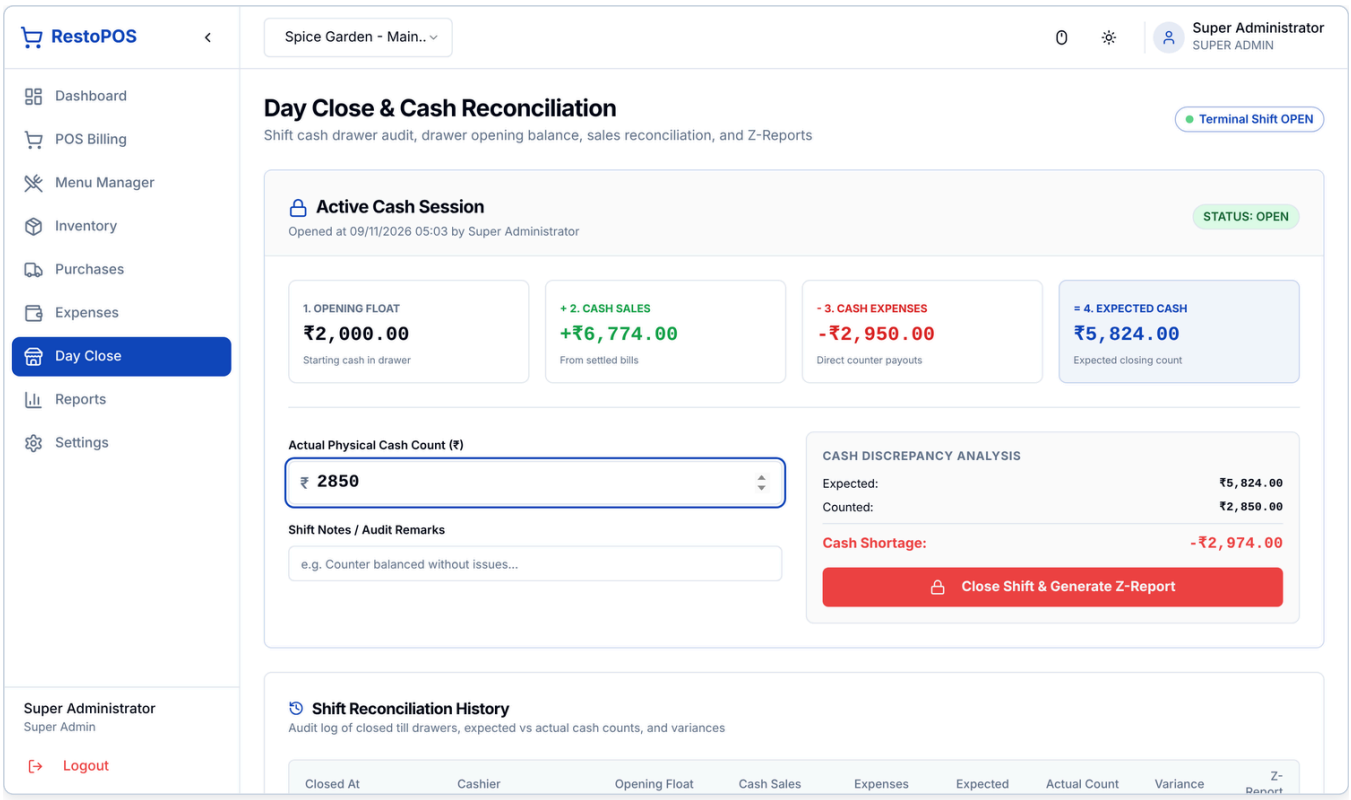

Figure 25. *Entering the physical cash count before closing the shift*

Purpose: make sure the cash in the drawer matches the books.

Opening the drawer (start of shift)

Screen title **Open Daily Cash Drawer**.

Field	Meaning
Opening Cash Balance Float (₹)	The money already in the drawer to give change.
Open Cash Drawer & Start Billing	Starts the shift. Cash bills are counted from now on.

During the shift — Active Cash Session

Shows when it opened and by whom, with four figures:

Figure	Meaning
Starting cash in drawer	Your opening float.
From settled bills	Cash received from paid bills (+).
Direct counter payouts	Expenses paid from the drawer (−).
Expected closing count	Opening + Cash sales − Counter payouts.

Closing (end of day)

Field	Meaning
Actual Physical Cash Count (₹)	Count the notes and coins and type the total.
Shift Notes / Audit Remarks	Optional explanation, e.g. "₹50 short — coin change".

Field	Meaning
Expected / Counted	Shown live while typing, with the **difference**: green = matches or excess, red = **shortage**.
Close Shift & Generate Z-Report	Completes and locks the shift (“Day close completed and reconciled!”) and opens the Z-Report.

Shift Reconciliation History

A table of past shifts: **Closed At, Cashier, Opening Float, Cash Sales, Expenses, Expected, Actual Count, Variance, Z-Report**. Press the document icon to open the **Z-Report** — a printable summary (*DAILY Z-REPORT*: cashier, shift ID, opening float, cash sales, cash expenses, expected till total, actual counted cash, variance/shortage). **Print Z-Report** sends it to the printer; **Close** shuts it.

> UPI, card and online-app payments are **not** counted in the drawer — only CASH.

6.8 Reports (Manager & Owner)

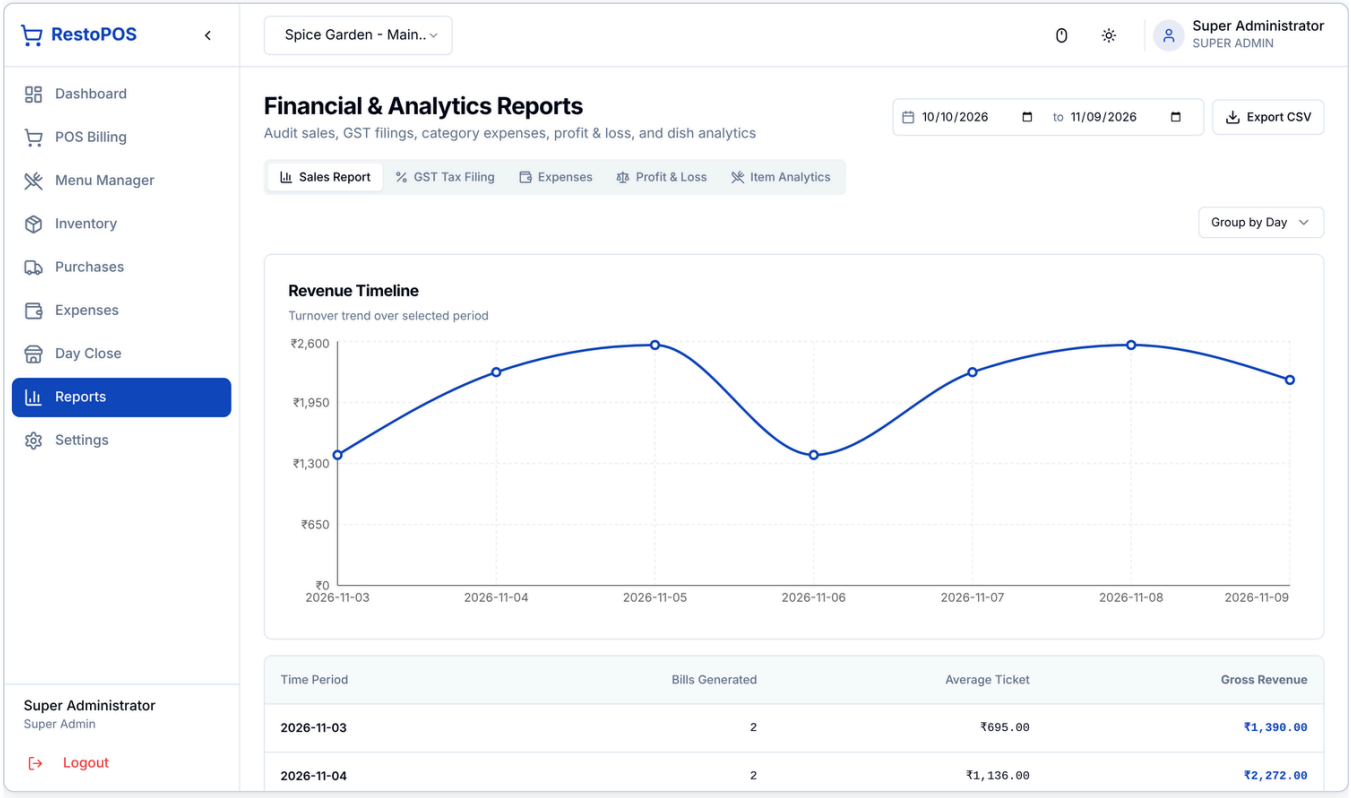

Figure 26. *Reports — Sales Report*

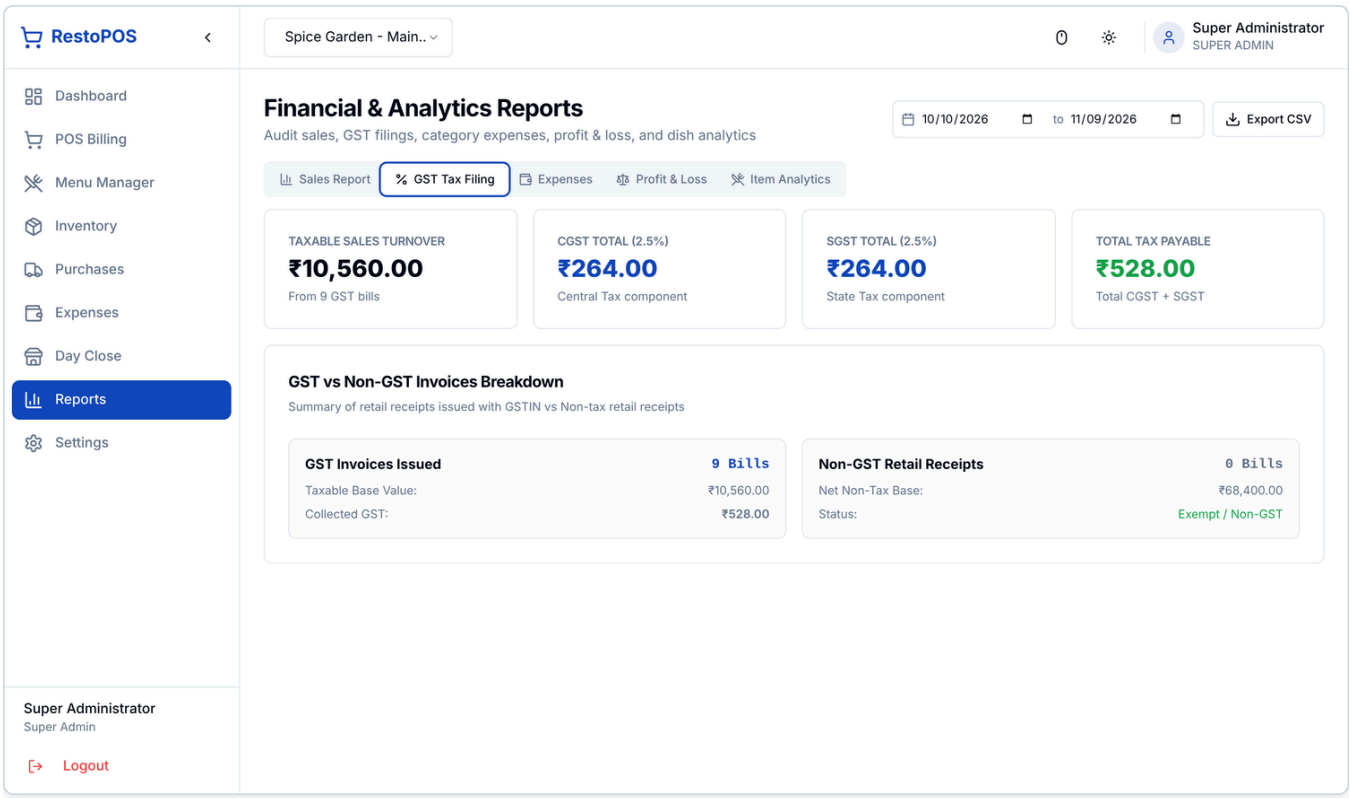

Figure 27. Reports — GST Tax Filing

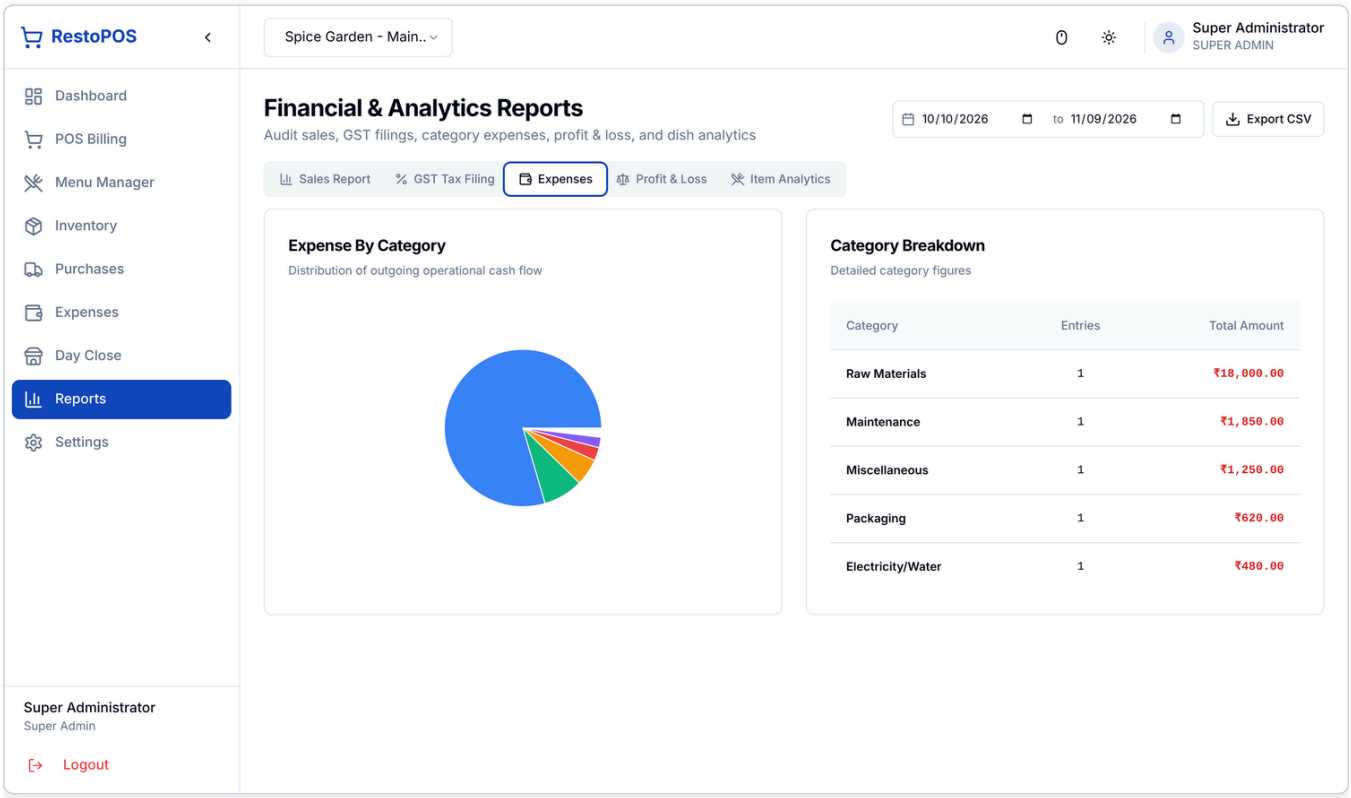

Figure 28. Reports — Expenses by category

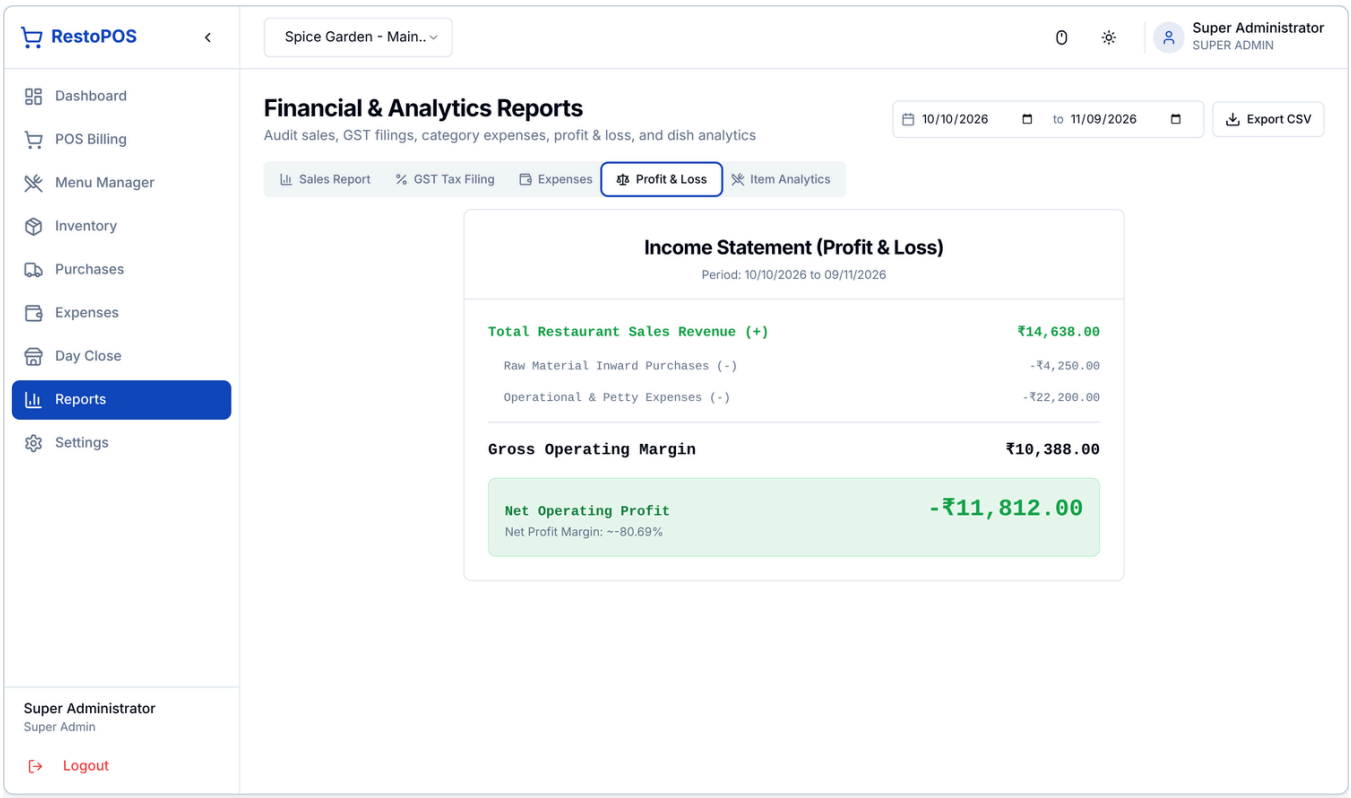

Figure 29. Reports — Profit & Loss

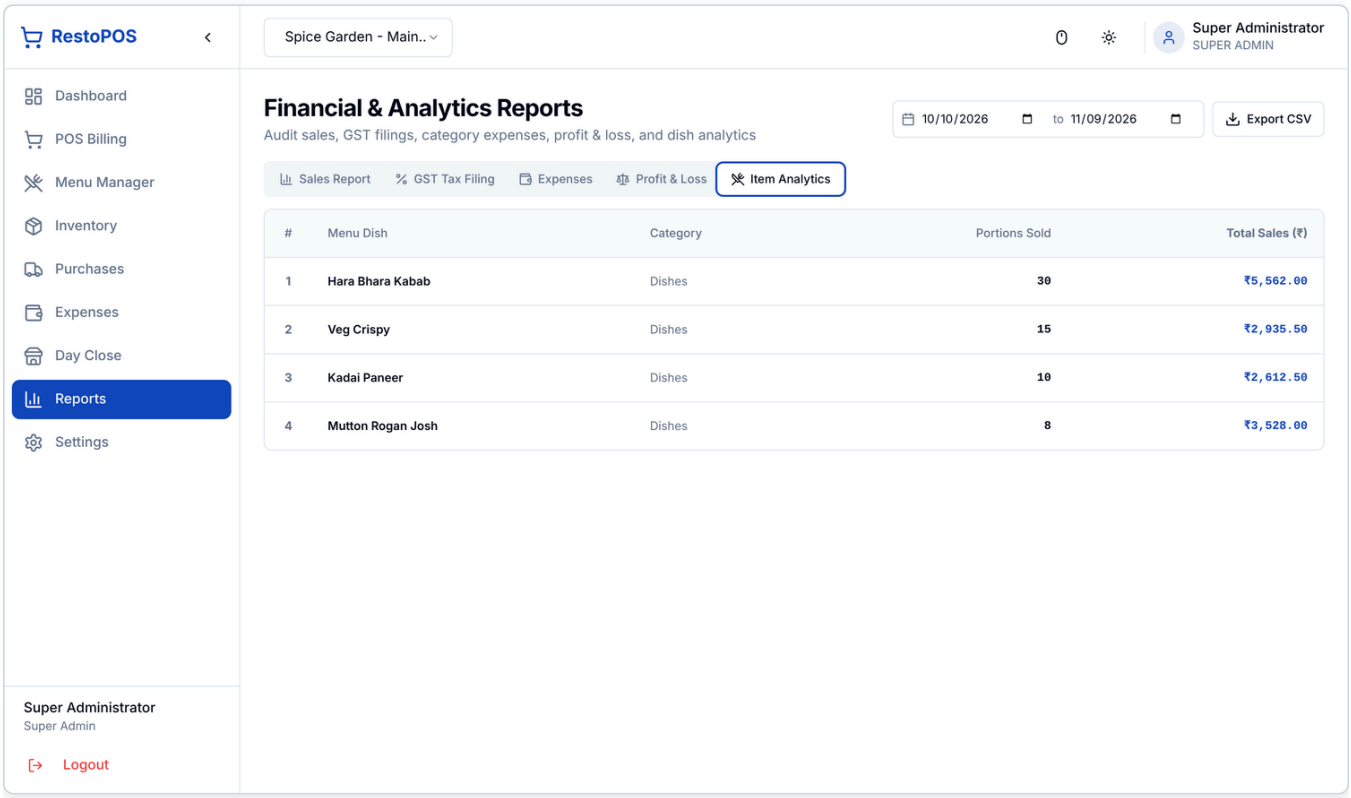

Figure 30. Reports — Item Analytics

At the top: **From date → to date** boxes and **Export CSV** (saves the current table to a spreadsheet file). Choose the tab, then the date range.

Tab	What it shows
Sales Report	**Group by Day / Week / Month**. Chart **Revenue Timeline** and table **Time Period, Bills Generated, Average Ticket, Gross Revenue**.
GST Tax Filing	**Taxable Sales Turnover**, **CGST Total**, **SGST Total**, **Total Tax Payable**, and the panel **GST vs Non-GST Invoices Breakdown** — *GST Invoices Issued* (bills count, taxable base, collected GST) against *Non-GST Retail Receipts* (net non-tax base, "Exempt / Non-GST").
Expenses	**Expense By Category** pie chart and the **Category Breakdown** table (**Category, Entries, Total Amount**).
Profit & Loss	**Income Statement** — Sales Revenue (+), Raw Material Purchases (−), Operational & Petty Expenses (−), **Gross Operating Margin**, final net profit and margin %.
Item Analytics	**Menu Dish, Portions Sold, Total Sales (₹)** — your best sellers.

Managers see their own branch. *The Owner* sees the branch currently selected in the top bar.

6.9 Settings (Owner only)

Press **Save Changes** (top right) after editing a branch-related tab. Tabs:

Branch Profile — *Outlet Details*

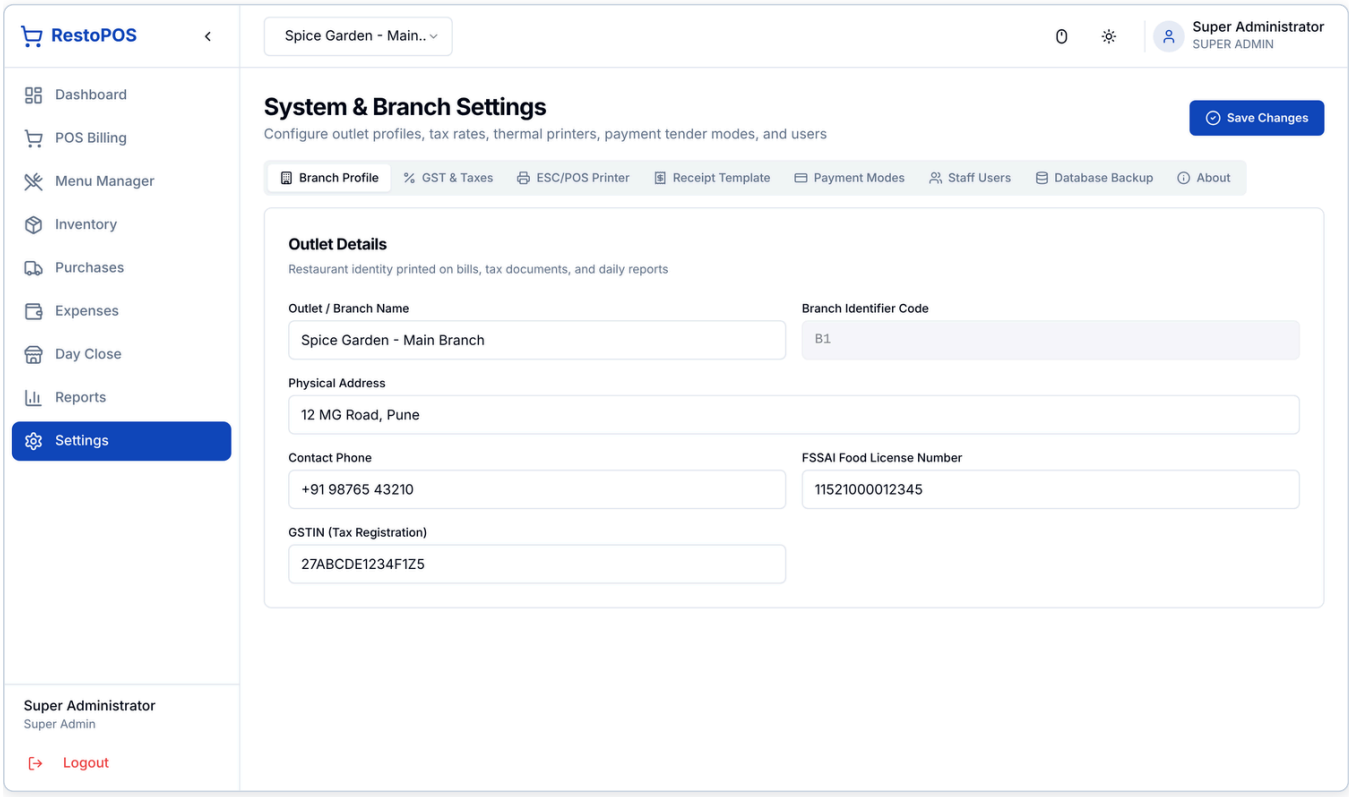

Figure 31. *Settings — Branch Profile*

Field	Meaning
Outlet / Branch Name	Printed on receipts.

Field	Meaning
Branch Identifier Code	B1…B4 (read-only).
Physical Address	Printed on receipts.
Contact Phone	Printed on receipts.
FSSAI Food License Number	Printed on receipts if enabled.
GSTIN (Tax Registration)	Printed on GST receipts.

GST & Taxes — *GST Configuration*

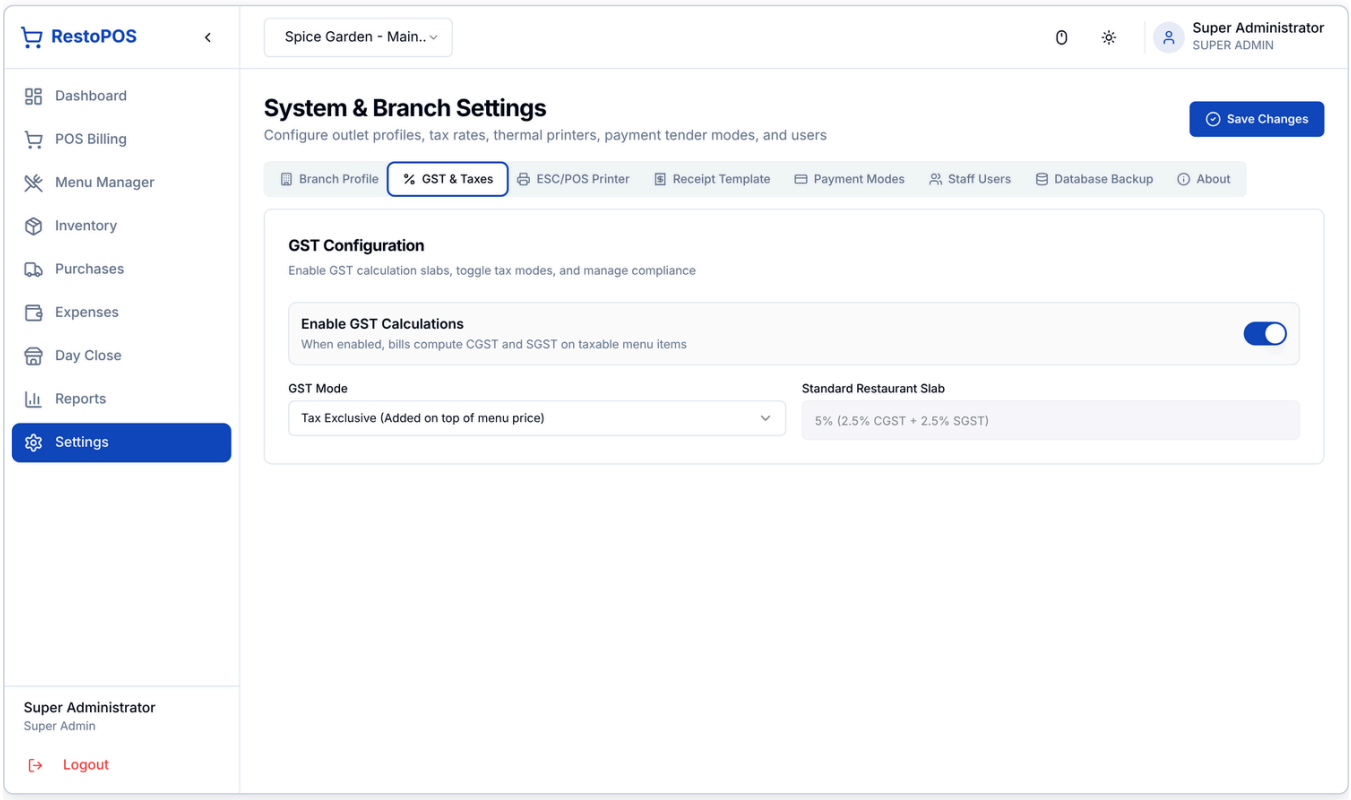

Figure 32. *Settings — GST & Taxes*

Field	Meaning
Enable GST Calculations	Master switch for this branch (default for new bills). Off = *Bill of Supply* (no tax shown).
GST Mode	*Tax Exclusive (Added on top of menu price)* or *Tax Inclusive (Prices include tax)*.
Standard Restaurant Slab	Information about the standard 5% slab (2.5% CGST + 2.5% SGST).

ESC/POS Printer — *Thermal ESC/POS Receipt Printer*

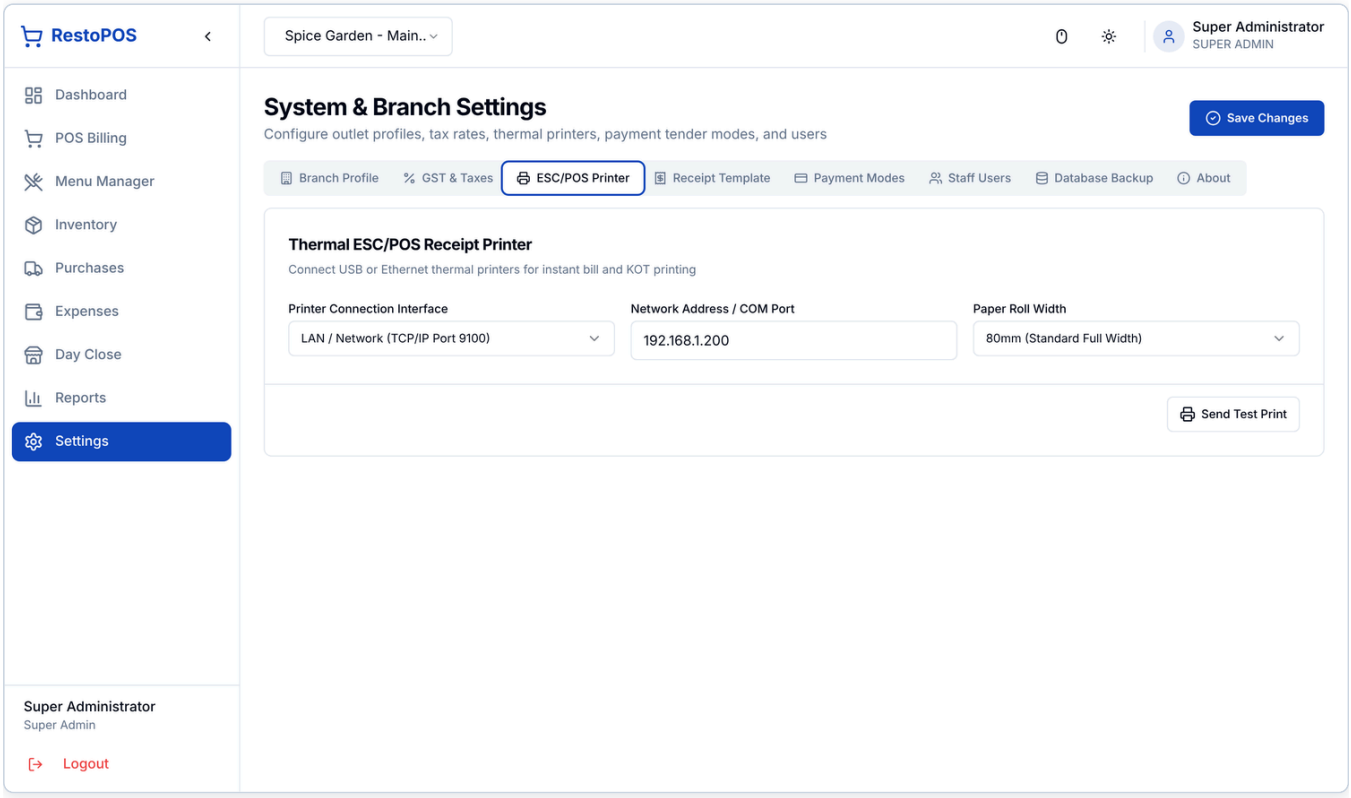

Figure 33. *Settings — ESC/POS Printer*

Field	Meaning
Printer Connection Interface	**None (Disabled)**, **USB Thermal (Virtual COM/Raw)**, **LAN / Network (TCP/IP Port 9100)**.
Network Address / COM Port	e.g. `192.168.1.200:9100` or `USB001`.
Paper Roll Width	**80mm (Standard Full Width)** or **58mm (Compact Mobile Width)**.
Send Test Print	Prints a test ticket so you can check connection and width.

Receipt Template — *Receipt Customization*

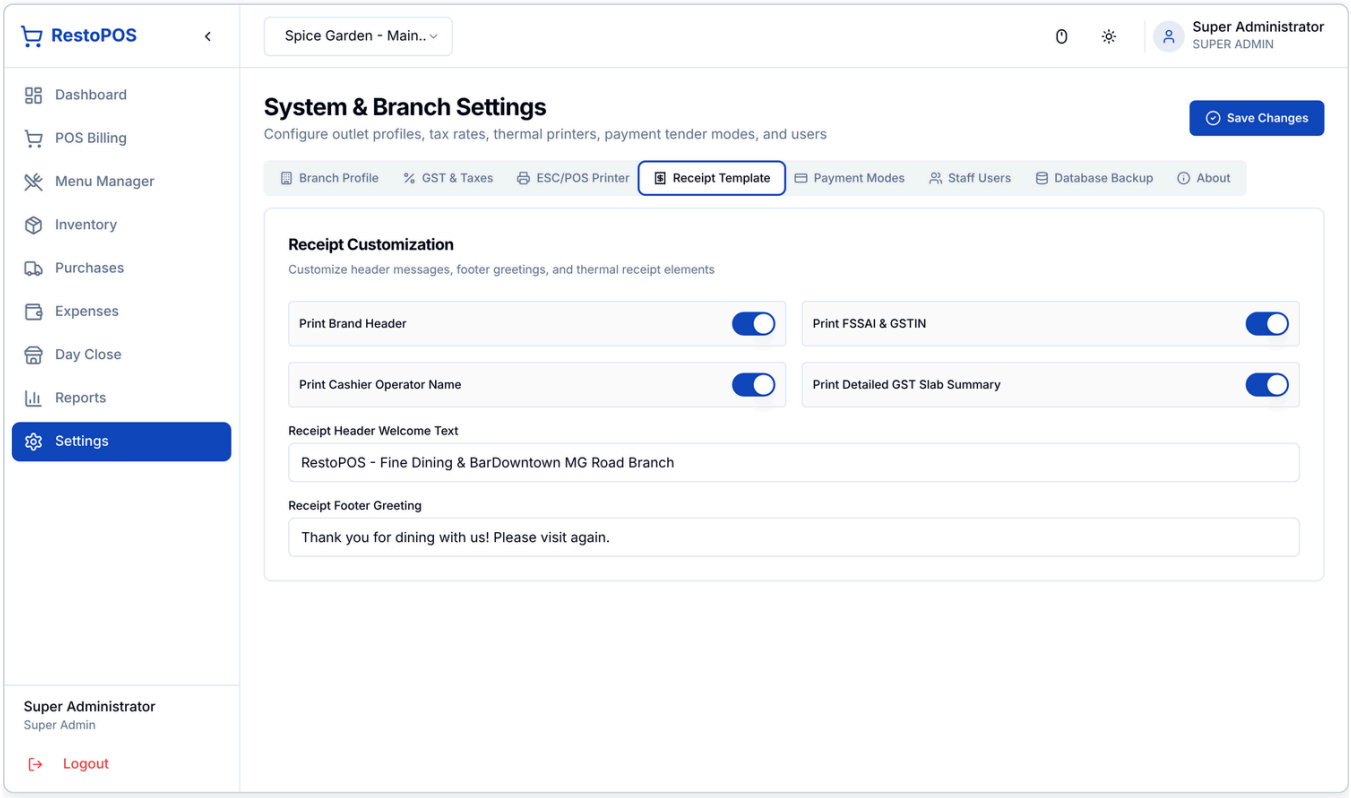

Figure 34. *Settings — Receipt Template*

Switches: **Print Brand Header**, **Print FSSAI & GSTIN**, **Print Cashier Operator Name**, **Print Detailed GST Slab Summary**; text boxes **Receipt Header Welcome Text** and **Receipt Footer Greeting** (e.g. “Thank you! Visit us again.”).

Payment Modes — *Payment Methods*

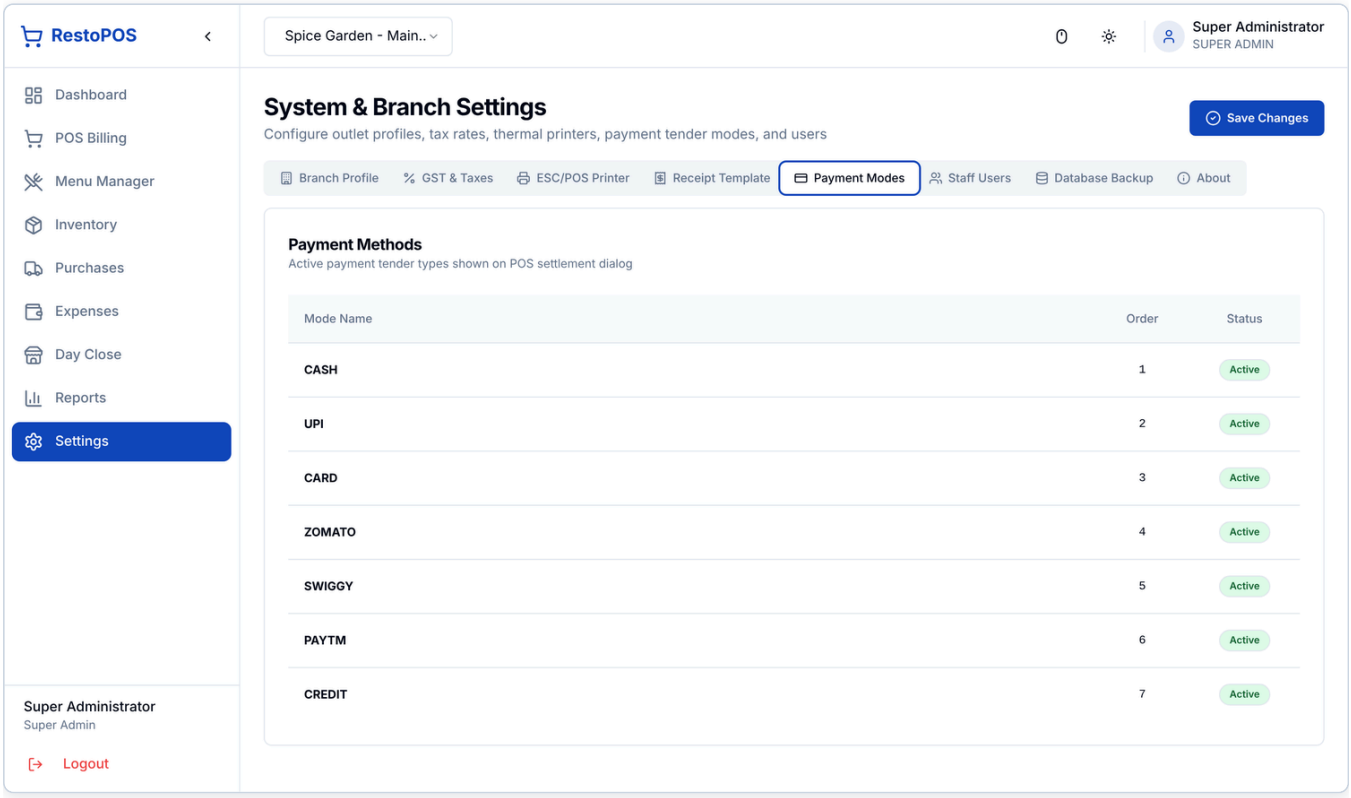

Figure 35. *Settings — Payment Modes*

Table (**Mode Name, Order, Status**) of the tender types the shop uses (Cash, UPI, Card, Zomato, Swiggy, Paytm, Credit...).

Staff Users — *User Management*

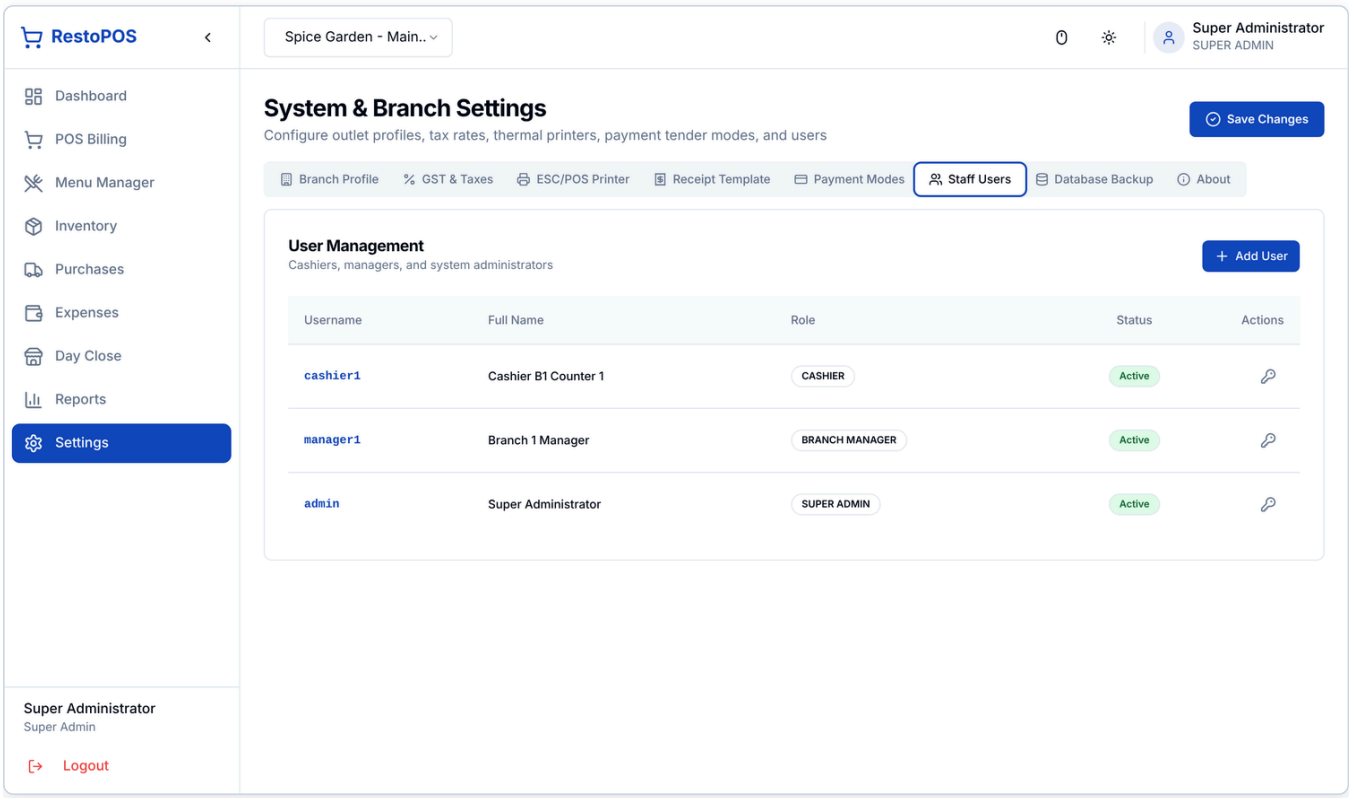

Figure 36. *Settings — Staff Users*

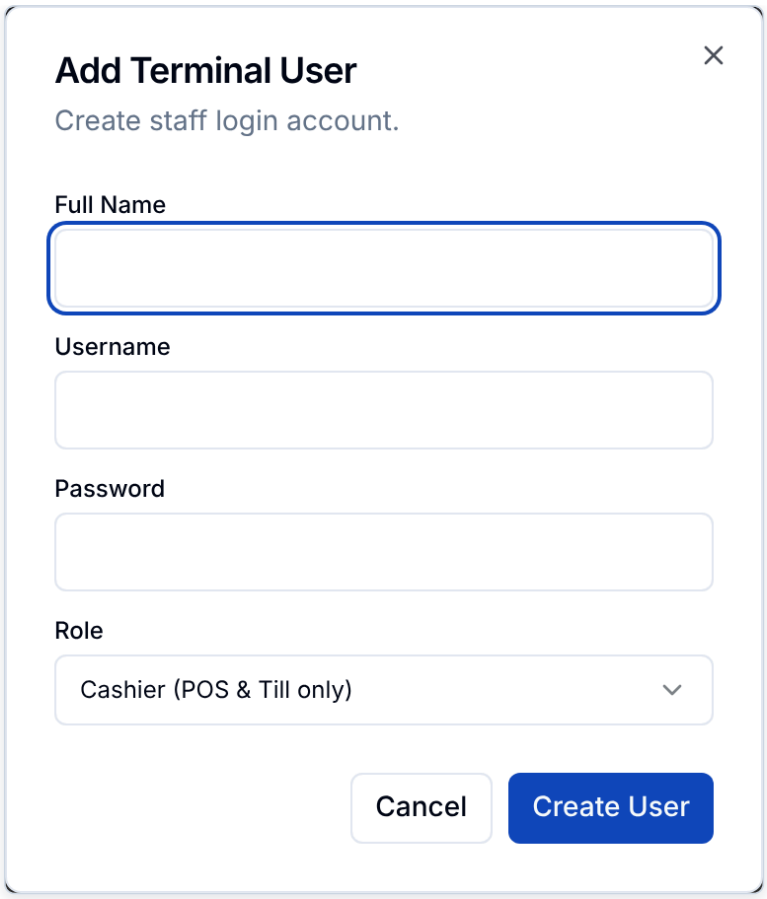

Figure 37. Add Terminal User dialog

Control	Meaning
Add User	Opens **Add Terminal User**: **Username**, **Full Name**, **Password**, **Role** — *Cashier (POS & Till only)*, *Branch Manager*, *Super Admin (All Outlets)* — then **Create User**. A Cashier/Manager is attached to the branch currently selected.
Table: Username, Full Name, Role, Actions	Existing staff with an **Active** badge.
Reset Password (key icon)	Opens **Reset User Password** → type **New Password** → **Save Password**.

Database Backup — *Offline SQLite Backups*

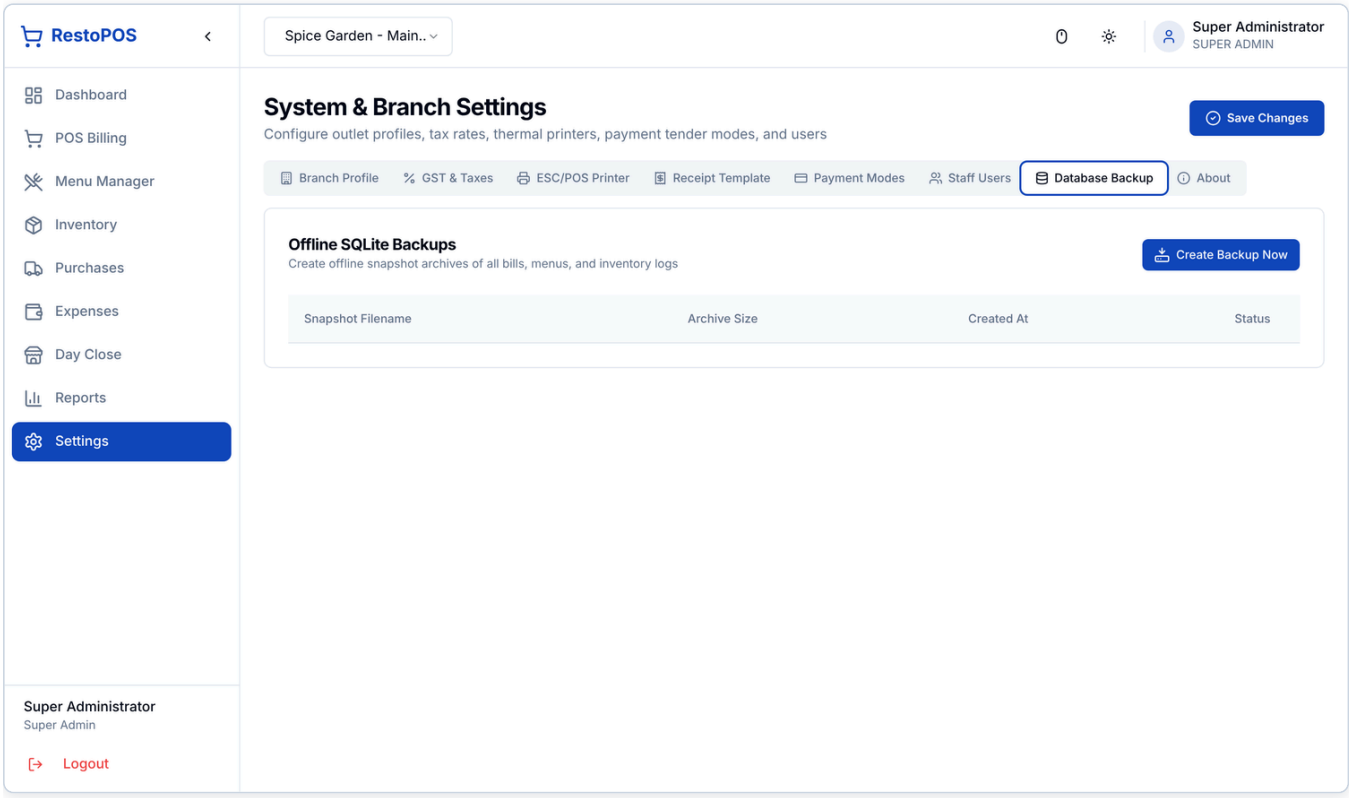

Figure 38. Settings — Database Backup

Control	Meaning
Create Backup Now	Copies the database file into the `backups` folder inside the program folder.
Snapshot Filename, Archive Size, Created At, VERIFIED	The list of backups made.

About

Shows the version and the technology used.

7. The Owner’s routine

Daily: Dashboard → Branch Performance Matrix → check each branch’s Day Close variance (Day Close → history). **Weekly:** Reports → Item Analytics (what sells), Expenses (where money goes). **Monthly:** Reports → GST Tax Filing → **Export CSV** for your accountant; Profit & Loss; create a **Backup** and copy the backup file to a pen-drive or cloud drive. **Staff changes:** Settings → Staff Users → add new staff; reset passwords; (a person who leaves should have their password changed immediately).

8. GST explained simply

- **GST Off (Bill of Supply):** no tax columns; the customer pays exactly the menu price.
- **GST On:** each dish uses its own **GST Rate** (set in Menu Manager). The tax is shown on the bill split into **CGST** and **SGST** (half each).
- **Per bill switch:** on the POS press **F8** (or tap **GST (F8) ON/OFF**) to turn GST on or off for that one bill.
- **Reports → GST Tax Filing** summarises GST bills separately from non-GST bills, ready for your accountant (use **Export CSV**).
- In this version the POS adds GST **on top** of the menu price when GST is ON (the *exclusive* method). Discuss with your accountant before choosing inclusive pricing.

9. How the parts work together (what happens when…)

When you…	The software automatically…
Settle a bill with **CASH**	Adds the cash to the open Day Close session.
Settle with UPI / Card / apps	Records it in sales and reports, but **not** in the cash drawer.
Record an expense from **Counter Cash Drawer**	Reduces *Expected closing count* in Day Close.
Record an inward purchase	Increases stock and shows the supplier's balance/status.
Make a stock adjustment	Changes stock and writes a history log entry.
Turn GST on	Adds tax to the bill and the GST report.

10. Daily workflows

10.1 Opening checklist (Cashier / Manager)

1. Switch on computer and printer; open the software and sign in.
2. (Owner) pick the branch in the top bar.
3. Day Close → enter opening float → *Open Cash Drawer & Start Billing*.
4. In POS, check that today's dishes are available (Manager: Menu Manager → *Available for Order?*).

10.2 During service

- Orders: POS (6.2). Kitchen: **F2**. Payment: **F12**.
- Money out of the drawer: Expenses → *Counter Cash Drawer*.
- Goods received: Purchases → New Inward Purchase.

10.3 Closing checklist

1. Settle or cancel every open bill (**F6** to see held/open bills).
2. Day Close → count cash → enter → close.
3. Read the **variance**. A shortage must be explained in *Shift Notes*.
4. Print the **Z-Report**.
5. (Owner/Manager) Settings → Create Backup Now.

11. Setup, backup and phone access (for the person maintaining the computer)

11.1 First-time setup on Windows

1. Install **Node.js (LTS 20 or 22)** from nodejs.org.
2. Copy the program folder to `C:\billing` (do **not** keep it inside OneDrive).
3. Open **Command Prompt** in that folder and run:

```
npm install
npm run setup
```

4. Start the program:
   - For testing: `npm run dev` → open **http://localhost:5173**
   - For daily use: `npm run build` then `npm start` → open **http://localhost:3456**

11.2 Starting every morning

Open Command Prompt in `C:\billing`, run `npm start`, and keep that window open all day. Closing it stops the software.

11.3 Default logins (change them!)

Role	Username	Password
Super Admin	`admin`	`admin123`
Branch Manager	`manager1`	`manager123`
Cashier	`cashier1`	`cashier123`

Change these immediately after first login: *Settings → Staff Users → Reset Password*.

11.4 Backups

- **Manual:** Settings → Database Backup → *Create Backup Now*. Files go to the `backups` folder in the program folder.
- **Safety copy:** copy the `backups` folder to a pen-drive or cloud storage at least weekly.
- The live data lives in `prisma\data\restopos.db`.
- To restore: stop the program, replace `restopos.db` with a backup copy, start again.

11.5 Clearing all test data

Run `npm run db:clear`. It first saves a backup copy, then deletes all data except users and branches. Afterwards re-enter your menu, categories, expense categories, etc.

11.6 Phone / tablet access and Windows Firewall

If phones cannot open the page, run this **once** in an Administrator PowerShell:

```
New-NetFirewallRule -DisplayName "RestoPOS" -Direction Inbound -Protocol TCP -LocalPort 5173,3456 -Action Allow
```

12. Troubleshooting & FAQ

Problem	What to do
Page does not open	Is the program window (`npm start`) still running? Is the address right?
Phone cannot open the page	Same Wi-Fi? Correct IP from `ipconfig`? Run the firewall command (11.6).
“Please select a branch” in POS	Owner: choose a branch in the top bar.
No tables to choose	Tables cannot yet be added from the screen (Chapter 13) — ask your installer to add them.
A dish is missing in POS	Menu Manager → check **Available for Order?** and the category.
Short code not found	Check the code in Menu Manager; codes are unique per dish.
Cannot add a menu item (Manager)	Only the Super Admin can create new items.
Cannot delete a category	Move or delete its dishes first.
Day Close shows a shortage	Check that every cash expense was recorded with *Counter Cash Drawer*, and every cash bill was settled.
Settle button disabled	The amounts entered do not yet cover **NET PAYABLE**.
Printer does not print	Settings → ESC/POS Printer → check interface, address and width → *Send Test Print*.
Forgot password	Owner: Settings → Staff Users → Reset Password.
A red message says a save failed	Nothing was saved. Check your connection and try again.
Everything is empty after setup	Normal for a new database — add menu, categories, suppliers, etc.

13. Current limitations (please read)

This version already covers daily billing, KOT, stock, purchases, expenses, day close, GST and reports. The following items from the original plan are **not available as screens yet**. They are noted here so that you can plan around them:

Area	Status in this version	Workaround
Add / edit tables	No screen to create dine-in tables.	Ask your installer to add tables to the database, or ask for this feature to be built.
Add new branches	No screen. Four branches (B1–B4) exist; rename them in *Settings → Branch Profile*.	Use the four existing branches.
Create/edit payment modes	Settings shows the list only; the POS offers CASH, UPI, CARD, ZOMATO, SWIGGY, PAYTM, CREDIT.	Use the POS list.
Inter-branch stock transfer	Not available as a screen.	Record *Damage/Adjustment* at the sender and a *Purchase/Adjustment* at the receiver.
Bill history / cancel / reprint older bills	No bills list screen.	Reports show totals; ask for this feature.
Automatic recipe (BOM) stock deduction when a dish sells	Recipes are saved; automatic deduction is not active. Direct stock tracking has no item-link screen yet.	Use **Inventory → Adjust Stock** for end-of-day usage.
Receipt Template switches	Switches are shown but their values are not yet stored.	Header/footer text per branch can be saved with *Save Changes*.
Item-level discounts, Zomato/Swiggy settlement	Only whole-bill discount.	Use *Add Discount*.
Master/HQ sync of 4 branches	Each computer keeps its own database.	Use one central PC for all branches on the same network, or ask for a sync feature.
Change my own password	Only the Owner can reset passwords.	Ask the Owner.

14. Glossary

Term	Meaning
POS	Point of Sale — the billing screen.
KOT	Kitchen Order Ticket — the slip printed for the kitchen.
Dine-In / Takeaway / Delivery	Order types.
Short code	The number you type to add a dish quickly.
Held bill	A bill saved but not paid.
Settle	Receive payment and close a bill.
Split tender	Paying one bill with more than one method.
Float	Starting cash kept in the drawer for change.
Z-Report	End-of-day cash summary of a shift.
Variance	Counted cash minus expected cash (negative = shortage).
GST / CGST / SGST	Goods & Services Tax; central and state halves.
GSTIN	Business's GST registration number.
FSSAI	Food-licence number.
BOM	Bill of Materials — a dish's ingredient list.
Round Off	Adjustment to a whole rupee.
Bill of Supply	A bill without GST.
